SUMMER TRAINING SCHOOL FOR RURAL TEACHERS

AT COLLEGE PARK, MD.

JUNE 22ND TO JULY 31ST, 1914

CONDUCTED UNDER THE AUSPICES OF THE
MARYLAND AGRICULTURAL COLLEGE,
IN CO-OPERATION WITH
THE STATE BOARD OF EDUCATION

Entered at College Park, Md., as Second Class Matter under Act of Congress, July 16, 1894.

MARYLAND NEEDS.

"What Maryland needs is a State-wide constructive program for redirecting the county schools toward the farm, the farm home, and higher levels of community life.——Taking everything into consideration, the social and civic center for the rural community should be the school building. It is the only building available for such purposes in every rural community, that belongs to all the people. The consolidated rural school with its social center assembly hall, laboratories and kitchens, ample play grounds and apparatus, demonstration farm and home for the teachers, has solved these problems in those communities fortunate enough to have such a school. A community conscience, which is a compelling force for community building, is created around such a school." (Edwin Lee Holton, Investigator for The Maryland Country Life Commission).

Summer Training School

FOR TEACHERS

East campus

College Park, Md.

JUNE 22nd TO JULY 31st, 1914

Summer School Faculty.

H. J. Patterson, D. Sc., President.

J. E. Metzger, B. S.,
Professor of Agricultural Education, Director Summer School.

Miss Emma S. Jacobs,
Director of Domestic Science, Public Schools, Washington, D. C.

W. T. L. Taliaferro, A. B.,
Professor of Soils and Crops.

T. B. Symons, M. S.,
Dean of School of Horticulture, Professor of Entomology and Zoology.

Myron Creese, B. S. E. E.,
Professor of Electrical Engineering and Physics.

J. B. S. Norton, M. S.,
Professor of Vegetable Pathology and Botany.

J. F. Monroe, B. S. A.,
Professor of Vegetable Culture.

Herman Beckenstrater, M. S.,
Professor of Pomology.

F. B. Bomberger, B. S. A. M.,
Professor of History and Political Economy.

Charles S. Richardson, A. M.,
Professor of English and Oratory.

R. H. Ruffner, B. S.,
Professor of Animal Husbandry.

E. N. Corey, M. S.,
Associate Professor of Entomology and Zoology.

B. W. Anspon, B. S.,
Associate Professor of Floriculture and Landscape Gardening.

L. B. Broughton, M. S.
Associate Professor of Chemistry.

Howard Lorenzo Crisp,
Associate Professor of Mechanical Engineering.

Grover Kinzy, B. Sc.,
Assistant in Soils and Crops.

Roy H. Waite, B. S.,
Poultryman, Maryland Experiment Station.

B. H. Darrow, B. S.,
Y. M. C. A. Secretary, in charge of Games and Amusements.

Special Instructors and Lecturers.

Dr. M. Bates Stephens,
State Superintendent of Public Schools.

Prof. B. K. Purdum,
Assistant State Superintendent of Public Schools.

Prof. A. C. Monahan,
Specialist in Rural Education, U. S. Bureau of Education.

On the Way.

THE early summer season is the most favorable time of the year to study agriculture and allied subjects at the college. The College Farm with its gardens, orchards, field crops and fertilizer plots is at its best. These opportunities for first hand study in addition to the outdoor life and the freedom from the care of the school room will make a few weeks spent at your Agricultural College delightful and profitable.

Although elementary agriculture has been required for a teachers' certificate in the State of Maryland, no provision has ever been made for teachers to secure this training. The Summer Session is aimed not only to provide such training, but to open the doors of the State Agricultural College to the people of the state for a longer portion of the year. In addition, it now offers instruction to a class of students who heretofore have not been securing many of its benefits.

The courses in Domestic Science and Art, and Industrial Hand Work should be particularly attractive to the women teachers of the state. These courses not only provide useful training, but include such work as can be done in elementary and rural schools.

The instruction in the summer school is free to the teachers of the state. Any teacher or prospective teacher who enrolls for the work will have living expenses only. This puts the work within the financial limits of every rural teacher of the state of Maryland.

It is to the public school that we must look for the diffusing of most of the agricultural knowledge, since only a limited number of our rural population ever get to college or regularly read its publications. With our rapidly increasing population the demand for more food stuffs is increasing daily, but the new land which we can bring under cultivation is comparatively small. Our farmers must learn to use what they have to a better advantage. The public school with its teacher trained in agriculture and domestic art will be an important factor in bringing this about.

Welcome.

On the Way.

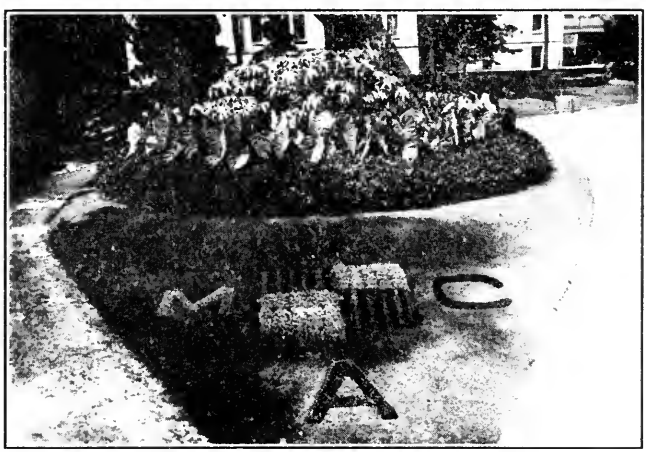
THE early summer season is the most favorable time of the year to study agriculture and allied subjects at the college. The College Farm with its gardens, orchards, field crops and fertilizer plots is at its best. These opportunities for first hand study in addition to the outdoor life and the freedom from the care of the school room will make a few weeks spent at your Agricultural College delightful and profitable.

Although elementary agriculture has been required for a teachers' certificate in the State of Maryland, no provision has ever been made for teachers to secure this training. The Summer Session is aimed not only to provide such training, but to open the doors of the State Agricultural College to the people of the state for a longer portion of the year. In addition, it now offers instruction to a class of students who heretofore have not been securing many of its benefits.

The courses in Domestic Science and Art, and Industrial Hand Work should be particularly attractive to the women teachers of the state. These courses not only provide useful training, but include such work as can be done in elementary and rural schools.

The instruction in the summer school is free to the teachers of the state. Any teacher or prospective teacher who enrolls for the work will have living expenses only. This puts the work within the financial limits of every rural teacher of the state of Maryland.

It is to the public school that we must look for the diffusing of most of the agricultural knowledge, since only a limited number of our rural population ever get to college or regularly read its publications. With our rapidly increasing population the demand for more food stuffs is increasing daily, but the new land which we can bring under cultivation is comparatively small. Our farmers must learn to use what they have to a better advantage. The public school with its teacher trained in agriculture and domestic art will be an important factor in bringing this about.



Welcome.

Location and Description

THE Maryland Agricultural College is located in Prince George's County, Maryland, on the line of the Washington Branch of the B. & O. R. R., eight miles from Washington, and thirty-two miles from Baltimore. At least ten trains a day from each city stop at College Station, thus making the place easily accessible from all parts of the State. Telephone connection is made with the Chesapeake and Potomac lines.

The College grounds front on the Baltimore and Washington Boulevard. The suburban town of Hyattsville is two miles to the south, and Laurel, the largest town in the county, is ten miles to the north on the same road. Access to these towns and to Washington, may be had by steam and electric railway. The site of the College is particularly beautiful. The buildings occupy the crest of a commanding hill, which is covered with forest trees, and overlooks the entire surrounding country. In front, extending to the Boulevard, is a broad, rolling campus, the drill ground and athletic field of the regular students. In the rear are the farm buildings and barn. A quarter of a mile to the northeast are the buildings of the Experiment Station. The College farm contains about three hundred acres, and is devoted to fields, gardens, orchards, vineyard, poultry, etc., used for experimental purposes and demonstration work in agriculture and horticulture.

The general appearance of the College grounds is exceedingly attractive. They are tastefully laid off in lawns and terraces which are ornamented with shrubbery and flower beds. The view from the grove and campus cannot be surpassed.

Accommodations.

The College expects to have their new dormitory, which will accommodate one hundred and ten students, ready for occupancy before the opening of the Summer Session. The home of former presidents of the College, located on the campus, will afford accommodations for thirty students. These accommodations will be reserved for women applicants. Ample accommodations may be had for students in the village or in the nearby towns of Berwyn, Riverdale and Hyattsville. The cost of board at the College dining hall will be twenty-four dollars for the entire term or at the rate of four dollars per week. The room rent is one dollar per week.

Expenses.

Board	$24.00
Room	6.00
Fees	5.00

Faculty.

The faculty of the Summer Session will consist of members of the regular college staff, aided by lecturers and specialists of other institutions who are of known efficiency in their work.

Registration.

Monday, June 22d., will be registration day. Students should register on Monday and be ready for the class work on Tuesday, June 23d. Admission to class work after June 23d. may be had by special permission only. Students may register in advance by filling out the enclosed blank, and mailing to the Director of the Summer Session.

Tuition and Fees.

The instruction is free to all teachers of Maryland and the District of Columbia. A registration fee of five dollars will be charged to all applicants who are residents of the state of Maryland, and a charge of ten dollars to non-residents. This fee will be used to cover the cost of janitor service, lighting of class and lecture room, and for general use of College property.

Courses.

Instruction will be given in the following subjects: Elementary Agriculture, Domestic Science, Domestic Art, Industrial Hand Work, History of Maryland, Nation and State Constitutions and School System of Maryland, Theory and Practice of Teaching, Botany, Zoology, Entomology, Chemistry, Physics.

Books.

Teachers should bring with them any text books relating to the subjects in which they expect to receive instruction. The College will order and deliver at cost any books which are necessary for the student in the work. A nominal charge will be made for each book loaned by the College.

The College and Experiment Station Libraries will be open for students' use. They contain a carefully chosen list of reference books in the Sciences, History, Biography, Poetry and the standard works of Fiction. In addition, the shelves contain a complete set of State and National reports and surveys.

Work Required.

All rural teachers will be required to take at least two of the vocational subjects. It is desirable that the male teachers take the courses in Elementary agriculture and rural industrial work. The female teachers will take the courses in Home Economics and Elementary Agriculture.

All teachers holding provisional certificates will be required to take the work in at least two of the following subjects: Theory and Practice of Teaching, National and State Constitutions and School Systems of Maryland, and History of Maryland. They may elect such other courses as time and individual ability will permit.

Credits.

Students completing the work in the required subjects and passing a satisfactory examination shall be given credit for these subjects on their teacher's certificates by the County Superintendent of their respective county. The Agricultural College will give entrance or college credit, respectively, in all subjects in which the student performs the requisite amount of work.

Field Excursions.

The vicinity of College Park abounds in places of historic and geologic interest. The College farm with its experiments in fertilizers, field crops, market garden crops, fruits, dairy herds, and poultry plant will afford ample opportunity for useful

study. The City of Washington, which is only eight miles distant, will give the students unbounded opportunity to study the Governmental Departments at first hand. Several prearranged excursions to places of interest will be features of the Summer Session.

Program.

Breakfast	7.00 a. m.
First Hour Classes	8.15 to 9.05 a. m.
Second Hour Classes	9.15 to 10.05 a. m.
Assembly	10.10 to 10.25 a. m.
Third Hour Classes	10.30 to 11.20 a. m.
Fourth Hour Classes	11.30 to 12.20 a. m.
Noon	12.20 to 1.20 p. m.

AFTERNOON.

Fifth Hour Classes	1.20 to 2.10 p. m.
Sixth Hour Classes	2.2 to 3.10 p. m.
Conference Hour	3.15

Conference Hour.

The Conference Hour is planned for two specific purposes. First, to give the student an opportunity to confer with instructors on subjects relative to school work. Second, an hour in which men of prominence in their special lines of work will address the students, or conduct "Round Table" discussions. These lectures will be given by appointment, and will be along Country Life lines.

Games and Amusements.

Students will have the use of the Athletic Field and Gynasium. They will be taught games and organized play in a way that will not only give them beneficial recreation, but instruction also.

Description of Courses.

Elementary Agriculture.

An elementary course conducted by means of text-books, recitations, laboratory work, and farm observations. Three recitations and three double laboratory periods per week; special instructors, from the divisions of the Department of Agriculture of the College, will demonstrate and give practical work in the different branches of the subject. The laboratories and apparatus of the Agricultural College will be used in this work. The student will be provided with outlines, references and methods of presenting this work in the rural schools. The laboratory and field work will be divided as follows, a week being given to each division: Soils and Soil Fertility, Farm Crops, Animal Husbandry, Horticulture, Vegetables and Fruits, and Poultry. Professors Metzger, Taliaferro, Monroe, Beckenstrater, Ruffner Waite and Kinzy.

Domestic Science.

The Domestic Science course will be a presentation of the subject in such a way as to enable the teachers to carry the work into the rural schools. The work comprises a study of foods, Sanitation, Hygiene, and Domestic Art. Two periods daily.

Foods.—The kinds of foods will be considered as to composition and use to the body. Emphasis will be placed on the cost, and preparation of foods. The course will include the study of vegetables, cereals, breads, meats, eggs and milk.

Hygiene.—A study of the improved methods of heating, ventilating and lighting of homes and school rooms; personal hygiene, bandaging and first aid remedies.

Sanitation.—An elementary course in household bacteriology, water supplies, sewerage. disposal and the principles of cleaning as applied to homes and household utensils. Miss Jacobs.

Industrial Hand Work.

This course is intended for both men and women. The work is divided into three parts.

HOUSEHOLD ART.—A course for women. The work will be such as is applicable to rural schools. It will include the making of a series of models illustrating the various stitches, and the drafting and making of a number of garments. Lessons in materials, textiles and fibres will be given in this course.

CARPENTRY.—A course for men. An elementary course in carpentry in which the use and care of tools, and the principles of joinery are taught. Special attention will be given to the planning of plain structures for the home and farm.

HANDICRAFT.—A course for men and women. The course includes work in weaving, braiding, raffia, iron and brass, and the tying of knots in ropes and cords, the making of hitches and fastenings, and splicing of ropes so that they run smoothly through pulleys. A rope halter will also be constructed. Miss Jacobs, Professor Crisp.

History of Maryland.

This course will give the student a broad knowledge of the colonial and State history of Maryland. It will be interesting and valuable for teachers to make a special study of the history of Maryland in this the Centennial year of its final independence. The course will meet the requirement for credit for a first grade certificate. Professor Richardson.

National and State Constitutions and School System of Maryland.

This course will meet the requirements of the State Board of Education for credit for a first grade certificate. The course comprises a study of the National and State Constitutions. In addition, it will acquaint the student with the duties of a teacher as an officer of the state, school boards, trustees, contracts, care of property, records and reports. Prof. Bomberger.

Theory and Practice of Teaching.

A course in the theory and art of teaching, combined with a comprehensive study of the State course of study as planned by the State Superintendent in co-operation with the County Superintendents. Professor Metzger.

Botany.

An elementary course in the general principles of anatomy, morphology, and physiology of higher plants. The structure and types of seed, root, stem, leaves, flowers, and fruit are studied in the field and laboratory, with a brief consideration of the functions of the different plant organs. There is also field work designated to give knowledge of the common Maryland plants. Each student will make a collection of plants and identify them. Professor Norton.

Zoology and Entomology.

This course is designed to give the student a practical working knowledge of animal life, plant diseases, injurious insects. A study will be made of the general form, characteristics, habits and classification of animals. Professor Corey.

Chemistry.

An elementary course in general chemistry with special reference to the chemistry of foods, plants, animals, soils, fertilizers and chemistry of cleaning. Professor Broughton.

Physics.

A course of lectures, recitations and experimental demonstrations by the instructor on the mechanics of soils, liquids and gases. The student is required to work problems and make practical applications of the principles studied. Professor Creese.

Certificates.

Students who complete the work in any of the summer courses will be granted a certificate at the close of the term. This certificate will show the amount and grade of work covered and will be signed by the College authorities.

ANNOUNCEMENT.

A Department of Agricultural Education has been established at the Maryland Agricultural College. The purpose of this department is to train teachers, in agriculture and allied subjects, to teach in the high schools and other secondary schools of the state. The course is arranged to give the students a broad general knowledge of agriculture, languages, sciences and pedagogy.

Full information concerning this course may be obtained by addressing President H. J. Patterson, College Park, Maryland.

OFFICERS AND FACULTY OF INSTRUCTION.

FACULTY AND INSTRUCTORS.

H. J. PATTERSON, Sc. D.,
President.

R. W. SILVESTER, LL. D.,
President Emeritus, Librarian.

THOMAS H. SPENCE, A. M.,
Vice-President, Professor of Languages.

H. B. McDONNELL, M. S., M. D.,
Professor of Chemistry.

W. T. L. TALIAFERRO, A. B.,
Professor of Agronomy.

HENRY T. HARRISON, A. M.,
Professor of Mathematics, Secretary of the Faculty.

SAMUEL S. BUCKLEY, M. S., D. V. S.,
Professor of Veterinary Science.

F. B. BOMBERGER, B. S., A M.,
Professor of Economics, Political Science and History.

CHARLES S. RICHARDSON, A. M.,
Professor of English and Public Speaking.

J. B. S. NORTON, M. S.,
Professor of Botany and Vegetable Pathology.

T. B. SYMONS, M. S.,
Dean of School of Horticulture, Professor of Entomology and Zoology.

HARRY GWINNER, M. E.,
Professor of Mechanical Engineering and Drawing, Superintendent of Shops.

T. H. TALIAFERRO, C. E., Ph. D.,
Professor of Civil Engineering.

MYRON CREESE, B. S., E. E.,
Professor of Electrical Engineering and Physics.

HERMAN BECKENSTRATER, M. S.,
Professor of Pomology.

J. F. MONROE, B. S. A.,
Professor of Vegetable Culture.

J. A. DAPRAY, MAJOR, U. S. A., (Retired),
Commandant, Professor of Military Science and Tactics.

J. E. METZGER, B. S.,
Professor of Agricultural Education.

R. H. RUFFNER, B. S.,
Professor of Animal Husbandry.

F. W. BESLEY, A. B., M. F., Sc. D.,
Lecturer on Forestry.

HOWARD LORENZO CRISP,
Associate Professor of Mechanical Engineering.

E. N. CORY, M. S.,
Associate Professor of Entomology and Zoology.

C. P. SMITH, B. S., A. M.,
Associate Professor of Botany.

Withdrawn

B. W. ANSPON, B. S., (H. and F.),
Associate Professor of Floriculture and Landscape Gardening.

L. B. BROUGHTON, M. S.,
Associate Professor of Chemistry.

H. C. BYRD, B. S.,
Director of Physical Culture, Instructor in English.

LEROY L. BURRELL, B. S.,
Instructor in Small Fruits.

NATHAN REED WARTHEN, B. S.,
Instructor in Mechanical Engineering.

GROVER KINZY, B. S.,
Instructor in Agronomy.

G. P. SPRINGER, B. S.,
Instructor in Civil Engineering and Mathematics.

C. L. C. KAH, B. S.,
Instructor in Electrical Engineering and Physics.

M. M. HARGROVE, A. M.,
Instructor in Languages.

B. H. DARROW,
Secretary Young Men's Christian Association.

P. L. GOWEN, B. S.,
Instructor in Chemistry.

R. W. LAMSON, B. S.,
Instructor in Bacteriology.

OTHER OFFICERS.

HERSCHEL FORD, Ph. B.,
Registrar and Treasurer.

ALLEN GRIFFITH, M. D.,
Surgeon.

WIRT HARRISON,
Clerk to Treasurer.

MRS M. T. MOORE,
Matron in Domestic Department.

A. L. PERRIE,
Stenographer.

C. L. STROHM,
Armorer, Band Master and Clerk to the Military Department.

STATE WORK.

STATE DEPARTMENT OF FERTILIZER, FEED AND AGRICULTURAL LIME CONTROL.

(ORGANIZED 1894.)

H. B. McDONNELL, M. S., M. D.,
State Chemist.

T. D. JARRELL, B. S.,
Assistant Chemist.

A. C. ADAMS, B. S.,
Assistant Chemist.

P. L. GOWEN, B. S.,
Assistant Chemist.

A. M. GIBSON,
Assistant Chemist.

C. G. REMSBURG, B. S.,
Assistant Chemist.

GRAYSON BAGGS,
Clerk.

J. H. BROOKE,
Inspector.

G. J. MICHAEL,
Inspector.

G. L. BOUNDS,
Inspector.

E. M. PRICE,
Inspector.

H. C. WHITEFORD,
Inspector.

J. S. SCARBOROUGH,
Inspector.

N. J. WALSH,
Inspector.

W. B. EVERETT, Jr.,
Inspector.

H. S. KOEHLER,
Inspector.

STATE DEPARTMENT OF FARMERS' INSTITUTES.

(ORGANIZED 1896.)

RICHARD S. HILL, M. D.,
Director.

STATE HORTICULTURAL DEPARTMENT.

(ORGANIZED 1898.)

T. B. SYMONS, M. S.,
Chief Inspector.

J. B. S. NORTON, M. S.,
Botany, Vegetable Pathology.

H. BECKENSTRATER, M. S.,
Pomology.

J. F. MONROE, B. S. A.,
Vegetable Culture.

E. N. CORY, M. S.,
Entomology.

C. P. SMITH, B. S., A. M.,
Botany.

B. W. ANSPON, B. S.,
Floriculture, Landscape Gardening.

L. L. BURRELL, B. S.,
Small Fruits.

W. C. TRAVERS,
Inspector.

MISS ANNA E. F. McCARTHY,
Clerk.

MISS MARGARET M. SUMMERS,
Stenographer.

LECTURERS, 1913-1914.

SHORT WINTER COURSES.

FARM CROPS.

MR. W. OSCAR COLLIER, Easton, Md.

1. Corn Production and Improvement.
2. Sugar Corn.

MR. NICKOLAS SCHMITZ, Maryland Agricultural Experiment Station, College Park, Md.

Alfalfa.

MR. W. J. MORSE, U. S. Department of Agriculture, Washington, D. C.

Cow Peas and Soy Beans.

POULTRY.

MR. ROY H. WAITE, Maryland Agricultural Experiment Station, College Park, Md.

1. Housing and Yards.
2. Incubation.
3. Brooding.
4. Feeds and Feeding.
5. Caponizing Demonstration.
6. Killing, Picking and Packing of Poultry.

PROF. C. A. ROGERS, Cornell University, Ithaca, N. Y.

1. Principles of Feeding Laying Hens.
2. Breeding for Constitutional Vigor.

MR. C. L. OPPERMAN, Berwyn, Md.

1. A System of Poultry Management in Maryland.
2. Natural Incubation and Brooding.
3. The Cost of Egg Production.

MR. A. R. LEE, U. S. Department of Agriculture, Washington, D. C.

1. Hot Water and Stove Brooding.
2. Fattening Poultry.

DR. H. J. PATTERSON, President, Maryland Agricultural College, College Park, Md.

The Handling of Poultry Manure.

MR. HARRY LAMON, U. S. Department of Agriculture, Washington, D. C.

1. Mating and Breeding as it is Practiced by a Fancier.
2. Marketing Poultry Products.

DR. PHILIP B. HADLEY, Chief of the Division of Biology, Rhode Island Experiment Station, Kingston, R. I.

1. Diseases of Young Chickens.
2. Diseases of Adult Fowls.
3. Mendelism in its Relation to Poultry Breeding.

MR. CHARLES T. CORNMAN, Editor "Poultry Item," Sellersville, Penn.

1. Judging Poultry.
2. Poultry Judging Demonstration.

HORTICULTURE.

MR. C. P. CLOSE, U. S. Department of Agriculture, Washington, D. C.

1. Apple Soils and Apple Varieties for Maryland.
2. Peach Culture.
3. Nut Culture in Maryland.

MR. ORLANDO HARRISON, Berlin, Md.

The Propagation of Fruit Trees and General Nursery Practice.

MR. E. P. COHILL, Hancock, Md.

Orchard Management.

MR. DAVID B. STEWART, Baltimore, Md.

Marketing Orchard and Truck Crops.

MR. A. L. QUAINTANCE, U. S. Department of Agriculture, Washington, D. C.

Some Important Insect Pests of the Orchard.

MR. F. S. HOLMES, Maryland Agricultural Experiment Station, College Park, Md.

The Pollination of Fruits.

MR. W. R. BALLARD, Maryland Agricultural Experiment Station, College Park, Md.

Pear Culture.

MR. M. B. WAITE, U. S. Department of Agriculture, Washington, D. C.

Some Important Fruit Diseases.

DR. F. P. VEITCH, U. S. Department of Agriculture, Washington, D. C.

Lime and Its Application to Agriculture.

MR. W. F. ALLEN, Salisbury, Md.

Strawberry Culture.

MR. H. C. WHITEFORD, Whiteford, Md.

The Canning of Corn and Peas.

MR. THOMAS H. WHITE, Maryland Agricultural Experiment Station, College Park, Md.

Sweet Potato Culture.

DR. H. J. PATTERSON, President, Maryland Agricultural College, College Park, Md.

Fertilizers, Their Mixing and Use.

MR. L. C. CORBETT, U. S. Department of Agriculture, Washington, D. C.

The Importance of Good Seed in the Growing of Truck Crops.

MR. RICHARD VINCENT, JR., White Marsh, Md.

Beautifying Home Grounds and the International Flower Show.

FARM LIVE STOCK AND DAIRY.

DR. H. J. PATTERSON, President, Maryland Agricultural College, College Park, Md.

Review of Station Work in Animal Industry.

MR. R. J. CARR, U. S. Department of Agriculture, Beltsville, Md.

Hogs.

MR. R. BRIGHAM, Brinklow, Md.

1. Care and Management of Sheep.
2. Breeding-up the Farmer's Flock.

MR. G. E. WOLCOTT, U. S. Department of Agriculture, College Park, Md.

1. Dairying.
2. Co-operative Breeders' Association.
3. Breeding-up a Herd.

STUDENT RECORDS: Messrs. Spence, Harrison, Bomberger, Gwinner, and Beckenstrater.

STUDENT RELATIONS: Messrs. Bomberger, Harrison, Richardson, Symons, and Broughton.

CALENDAR.

1914.

THIRD TERM.

Monday, March 23rd.—Third Term Begins.
Wednesday, April 8th, Noon, to Tuesday, April 14th, 1 P. M.—Easter Recess.
Friday, May 15th.—Submitting of Theses.
Friday, June 12th.—Final Meeting of Trustees.
Sunday, June 14th.—Baccalaureate Sermon.
Monday, June 15th.—Class Day.
Tuesday, June 16th.—Alumni Day.
Wednesday, June 17th, 11 A. M.—Commencement Day Exercises.

1914-15.

FIRST TERM.

Tuesday, September 15th, and Wednesday, September 16th.—Entrance Examinations.
Thursday, September 17th, 1 P. M.—College Work Begins.
Thursday, November 26th.—Thanksgiving Recess.
Tuesday, December 22nd, 12 M.,—First Term Ends.
Tuesday, December 22nd, 12 M., to Tuesday, January 5th, 1 P. M.—Christmas recess.

SECOND TERM.

Tuesday, January 5th, 1 P. M.—Second Term Begins.
Wednesday, January 6th.—Special Winter Courses Begin.
Monday, February 1st.—Filing Subjects of Theses.
Saturday, March 20th.—Second Term and Special Winter Courses End.

THIRD TERM.

Monday, March 22nd.—Third Term Begins.
Wednesday, March 31st, Noon, to Tuesday, April 6th, 1 P. M.—Easter Recess.
Saturday, May 15th.—Submitting of Theses.
Friday, June 11th.—Final Meeting of Trustees.
Sunday, June 13th.—Baccalaureate Sermon.
Monday, June 14th.—Class Day.
Tuesday, June 15th.—Alumni Day.
Wednesday, June 16th, 11 A. M.—Commencement Day Exercises.

MARYLAND AGRICULTURAL COLLEGE.

HISTORY.

"An act to establish and endow an agricultural college in the State of Maryland" was passed by the Legislature of the State in 1856, and is found in Chapter 97 of the Laws of Maryland for that year. The scope of this act of incorporation is shown by the preamble, which reads as follows:

> WHEREAS, It has been represented to the Legislature, that certain wise and virtuous citizens are desirous of instituting and establishing in some convenient locality within this State, an Agricultural College and Model Farm, in which the youthful student may especially be instructed in those arts and sciences indispensable to successful agricultural pursuits; and
>
> WHEREAS, It doth appear to this Legislature, that while the wise and learned in the present age hath cultivated with laudable industry, and applied with admirable success the arts and sciences to other pursuits, the most necessary, useful and honorable pursuits of agriculturists have so far been lamentably neglected; and
>
> WHEREAS, It is the province and duty of the Legislature to encourage and aid the philanthropic citizens in their efforts to disseminate useful knowledge by establishing an Agricultural College and Model Farm, which shall, in addition to the usual course of scholastic training, particularly indoctrinate the youth of Maryland, theoretically and practically, in those arts and sciences, which with good manners and morals, shall enable them to subdue the earth and elevate the State to the lofty position its advantages in soil, climate, etc., and the moral and mental capacities of its citizens, entitle it to attain.

This was the first effort in the Western Hemisphere to use scientific investigation for the advancement of the vocation of Agriculture, since at that time no other institution of a similar character existed in the United States. Under the charter thus granted to a party of public-spirited individuals, the original College building was erected, and its doors were opened to students in the fall of 1859.

For three years it was conducted as a private institution. In 1862, the Congress of the United States, recognizing the valuable work in the cause of practical education which such colleges could achieve for the country passed the "Land Grant Act." This Act granted each State and Territory which should claim its benefit a proportionate amount of unclaimed Western lands, in place of scrip, the proceeds from the sale of which should apply under

certain conditions to the **"endowment, support and maintenance of at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."** This grant having been formally accepted by the General Assembly of Maryland, and the Maryland Agricultural College being named as the beneficiary of the grant, the College thus became, in part, at least, a State institution, and such it is at the present time.

During recent years the College has made a steady growth. This fact is evidenced by the increased number of students availing themselves of its facilities; by the erection of many new buildings—the library and gymnasium building, the chemical laboratory, Morrill Hall, the sanitarium, the engineering building, and Calvert Hall; as well as by the establishment of the Department of Farmers' Institutes and the State Departments of Chemistry (Fertilizer, Feed and Agricultural Lime Control), Horticulture, Entomology and Vegetable Pathology. As a consequence of its development under such favorable auspices the institution has become the most important factor in the agricultural and industrial development of the State.

The State Bureau of Forestry co-operates with the College, the Director being, by the terms of his appointment, Lecturer on Forestry at the Agricultural College.

LOCATION AND DESCRIPTION.

The Maryland Agricultural College is located in Prince George's county, Maryland, on the line of the Washington Branch of the B. & O. R. R., eight miles from Washington, and thirty-two miles from Baltimore. At least nine trains a day from each city stop at College Station, thus making the place easily accessible from all parts of the State. Telephone conection is made with the Chesapeake and Potomac lines.

The College grounds front on the Baltimore and Washington Boulevard. The suburban town of Hyattsville is two miles to the

south, and Laurel, the largest town in the county, is ten miles to the north on the same road. Access to these towns and to Washington may be had by steam and electric railway. The site of the College is particularly beautiful. The buildings occupy the crest of a commanding hill, which is covered with forest trees, and overlooks the entire surrounding country. In front, extending to the Boulevard, is a broad, rolling campus, the drill ground and athletic field of the students. In the rear are the farm buildings and barn. A quarter of a mile to the northeast are the buildings of the Experiment Station. The College farm contains about three hundred acres, and is devoted to fields, gardens, orchards, vineyard, poultry yards, etc., used for experimental purposes and demonstration work in agriculture and horticulture.

The general appearance of the College grounds is exceedingly attractive. They are tastefully laid off in lawns and terraces which are ornamented with shrubbery and flower beds. The view from the grove and campus cannot be surpassed.

The location of the College is healthful; the sanitary conditions are excellent. No better proof of this can be given than that there has been practically no serious case of illness among the students for many years.

COLLEGE BUILDINGS.

The original College building completed in 1859, and the administration building completed in 1904, and connected with the former by a covered bridge, were completely destroyed by fire on the night of November 29, 1912. A temporary assembly hall, kitchen and dining hall have been erected and are now in use. Living rooms for a part of the students are available in several houses on the College farm. Calvert Hall, the dormitory in course of construction, will be ready for occupancy in July.

In 1894 the building used as the gymnasium and library was erected. The gymnasium, on the ground floor, is being used, temporarily, as an armory. The library and reading room is on the second floor, and is well-lighted and commodious.

The Departments of Civil, Electrical and Mechanical Engineering and the Department of Physics are located in the two-story

brick building erected in 1896, the brick annex erected in 1904, and the brick addition constructed in 1909. This latter, which consists of a main building four stories in height and a wing three stories in height, is so arranged as to form with the buildings previously erected a concrete whole. In this group of buildings are found laboratories of various kinds, wood and machine shops, a forge room and foundry, drawing rooms, blue print rooms, instrument rooms, lecture rooms, offices, a library room, lavatories, lockers, etc. The equipment is modern in every respect and the facilities for work in the above named departments have been greatly increased.

The chemical building was completed in 1897, and is now thoroughly equipped. It contains several lecture rooms and laboratories for practical work and the analysis of fertilizers, feeding materials for domestic animals, and agricultural lime. This work is assigned by Acts of the General Assembly to the Professor of Chemistry at this College, who is thereby constituted State Chemist.

Important in the group of College buildings is Morrill Hall, erected in 1898. This building provides accommodations for the Departments of Agriculture, Horticulture, Entomology, Vegetable Pathology and Veterinary Science. A greenhouse for experimental work in entomology and vegetable pathology was erected in 1904. A range of ten greenhouses and a large potting shed are now in course of construction and will be ready for use at the beginning of the next scholastic year. These houses will afford splendid facilities for practical work.

The College Sanitarium, completed in 1901, is being used, temporarily, as the Administration Building.

GENERAL AIM AND PURPOSE.

The Agricultural College is the State school of science and technology. While seeking, first of all, to perform the functions of an agricultural college, its sphere of work has been widened to embrace all the sciences akin to agriculture, and all the arts related to mechanical training. To these special and prominent lines of work have been added such branches of study as are necessary for a liberal education, for the development of the intelligent citizen

and for general culture. The purpose of this college is to give young men anxious to prepare themselves for the active duties of life such training in the lecture room, laboratory and field as will enable them to take their places in the industrial world well prepared for the fierce competition of the day.

Recognizing that such an education, in order to be of practical advantage to many, must be offered at a cost within the means of all, the expenses for the year to the student have been reduced to the point where his college dues are not in excess of his ordinary daily expenses. It is to be remembered that the College is a State institution, in part supported by the State, in part by the Federal Government through its several endowment Acts, and that it is in no sense a money-making institution, but simply a medium of disbursement by the Government to those upon whom the safety, progress and prosperity of the State so largely depend.

While the College provides, as will hereafter be explained, several distinct courses of instruction, looking to the special training of the student in agriculture, engineering and science, the fact is clearly kept in view that a sound foundation must be laid for each and every course. Successful specialization is only practicable after the student has prepared for it by a thorough training in the essentials. All education must be narrow and one-sided which does not provide for the general culture of the student, and which does not look first to the natural and normal development of the individual. That the aim of the College is to train the student in a specialty without sacrificing his development in general culture is shown in the description of the general working plan given in the next paragraph.

It begins with the student in his first, or Freshman, year with a systematic and carefully adjusted scheme of work, differing but little in the several courses, and looking to his general development in mental strength, range of information and power of expression and thought. At the beginning of his second, or Sophomore, year the differentiation may be said to begin along those lines for which he shows most natural aptitude. This gradual specialization continues during his third, or Junior, year, until in his last, or Senior, year, his work consists chiefly of a few closely correlated topics, in which he is thus able thoroughly to prepare himself. With the

present equipment of the laboratories and work-shops a student is able to become so proficient in his chosen line of work that when he leaves the College a successful career is open to him.

The Agricultural College is, logically, the crowning point of the public school system of Maryland. Its aim in particular is to provide a higher education for the graduates of the county schools. To this end its curriculum is adjusted to meet the preparation of such students. It is this class of young men that the College is especially desirous of reaching. Experience has shown that our most satisfactory students come as graduates from the county schools, and no efforts will be spared to make the transition from the high school to the College a possible one for all those actuated by an earnest desire to complete their education.

DEPARTMENTS OF THE COLLEGE.

AGRICULTURE—
- AGRICULTURAL EDUCATION.
- AGRONOMY.
- ANIMAL HUSBANDRY.

BOTANY AND VEGETABLE PATHOLOGY.
CHEMISTRY AND BACTERIOLOGY.
CIVIL ENGINEERING.
ECONOMICS, POLITICAL SCIENCES AND HISTORY.
ELECTRICAL ENGINEERING AND PHYSICS.
ENGLISH AND PUBLIC SPEAKING.
ENTOMOLOGY AND ZOOLOGY.
HORTICULTURE—
- POMOLOGY.
- VEGETABLE CULTURE.
- LANDSCAPE GARDENING AND FLORICULTURE.
- FORESTRY.

MECHANICAL ENGINEERING.
MILITARY SCIENCE.
PHYSICAL CULTURE.
SUB-COLLEGIATE INSTRUCTION.
VETERINARY SCIENCE.

The following pages give, under the several departments, the general character of the courses offered by each, and the main features of their equipment.

AGRICULTURAL EDUCATION.

PROFESSOR METZGER.

The work of the Agricultural Education Department is designed to meet the demand for men, trained in agricultural and allied subjects, to teach in the high schools of the State.

In the arrangement of the courses the needs of the agricultural

teacher have been kept in mind. The work, however, is open to any who desire an insight into the educational principles and problems of teaching vocational subjects.

The practice teaching is arranged to give the students of this Department experience in conducting class work and laboratory and field exercises. In addition, arrangement is made whereby the student receives both instruction and experience in the teaching and supervision of elementary industrial work in rural schools.

COURSES OFFERED.

1. Logic. Principles and practice of logic.

Text used: Jevon's Hill's "Logic."

Junior Year—Third Term, 2 theoretical periods per week.

2. Psychology. Principles of psychology. Lectures and textbook.

Text used: Angell's "Psychology."

Junior Year—First Term, 3 theoretical periods per week.

Senior Year—First Term, 4 theoretical periods per week.

3. History of Education. Outline of the historical development of modern education.

Text used: Monroe's "Brief Course in the History of Education."

Junior Year—Second Term, 5 theoretical periods per week.

Senior Year—Second Term, 4 theoretical periods per week.

4. Principles of Education. Study of the principles and methods of modern education.

Text used: Thorndike's "Education."

Junior Year—Third Term, 4 theoretical periods per week.

Senior Year—Third Term, 4 theoretical periods per week.

5. Methods of Teaching Secondary School Agriculture. The purpose of this course is the preparation of the student for the teaching of agricultural subjects through a knowledge of the educational aims, and of the principles applying to the choice of subject matter. The course involves a study of the recitation in its parts, the methods of conducting and the function of laboratory and field exercises, and the correlation of agriculture with other subjects.

Senior Year—First Term, 3 theoretical and 2 practical periods per week.

6. ORGANIZATION AND MATERIALS. A course in the organization of courses of study, demonstration projects, and the selection of materials for the work in agriculture in secondary and elementary schools. This course is designed to acquaint the student with the materials and equipment necessary for the successful teaching of secondary agriculture, scope of work, order of presentation and the sources of supplies and equipment for recitation and laboratory work. The function and the use of school land and of home demonstration work are considered.

Senior Year—Second Term, 3 theoretical and 2 practical periods per week.

7. RURAL ORGANIZATION. A course in which the aims, the functions, the methods of organization, and the relation of rural to city institutions are considered.

Senior Year—Third Term, 3 theoretical and 2 practical periods per week.

8. RESEARCH AND THESIS. The subject and lines of work to be arranged with the head of the Department. The purpose of the thesis is to study special problems in agricultural education.

SeniorYear —Third Term, 1 theoretical and 4 practical periods per week.

AGRONOMY.

PROFESSOR TALIAFERRO.
MR. KINZY.

The Department of Agronomy takes up the agricultural work pertaining to the field and its crops. A number of courses are offered. These treat of farm crops, their classification, soil and climatic adaptations, culture and improvement; soils, their physical and chemical properties, methods of treatment for maintenance and increase of productiveness; soil amendments, as manures, fertilizers, cover crops and lime; farm drainage; farm machinery; and farm management.

The College farm consists of two hundred and sixty-five acres of land and is operated by the Maryland Agricultural Experiment Station together with an adjoining leased farm.

Students of the College are kept in close touch with the general and experimental work on these farms which offer an unusual variety of soils and crops for observation and study.

Many of the students, who wish to do so, find work at fair wages on the farm and are thereby enabled to pay a part of their expenses as well as to gain valuable experience.

COURSES OFFERED.

20. ELEMENTARY AGRONOMY. This is an introductory course designed to acquaint the young student with the fundamental principles of good farm practice in the handling of soils and the profitable production of farm crops. At the same time it seeks to develop an interest in improved agriculture by showing its capabilities under proper management. Instruction is given by field and laboratory exercises with explanatory lectures.

Sub-Freshman Year—Third Term, 2 practical periods per week.

21. GENERAL AGRONOMY. The object of this course is to teach the approved methods of modern farm practice in regard to soils and crop production and from them by means of laboratory and field exercises, to deduce logically the scientific facts on which such practice rests. It also prepares the student for the more detailed study of soils and crops provided in the later courses.

Freshman Year—Second Term, 1 theoretical period per week; Third Term, 1 theoretical and 2 practical periods per week.

22. SOILS. The study of the physical and chemical conditions of the soils in their relation to profitable agriculture. The soil is the basis of all agriculture, and a knowledge of its properties and functions cannot be too highly emphasized. The study of this important subject is conducted by means of lectures, text-books, laboratory and field work. No State in the Union possesses a greater variety of soils than Maryland, and great attention is paid to the study of soil types in their relation to profitable agriculture.

A well-equipped soils laboratory and the wide variety of soils found on the College farm offer exceptional advantages in the theoretical and practical study of this important subject.

The text-book used is "Soils," by Lyon and Fippin.

Sophomore and First Year—First and Second Term, 2 theoretical and 4 practical periods per week.

23. Fertilizers. Of vital interest to the eastern and southern farmer of the present day is the fertilizing question. Between it and the profit and loss account is a very close connection, and frequently a lack of knowledge of the subject entails upon the farmer both the loss of money paid and of the possible increase of the crop. In this course the subject is developed logically from the needs of the plant and the efficiency of the soil to the selecting of the proper plant foods for each crop under varying conditions of soil and climate. Special attention is given to the home-mixing of fertilizers.

Sophomore and Second Year—Second Term, 2 theoretical and 4 practical periods per week.

24. Farm Crops and Drainage. A more detailed study of the common farm crops is taken up in this course than in any previous course. Instruction is given principally by lectures and practical work on the farm and in the laboratory. There is also provided on the Experiment Station farm practical work for the students in open ditching and under drains. Special attention is given to the principles and practice of tile drainage.

The text-book used in Farm Drainage is Elliott's "Practical Farm Drainage."

Sophomore and First Year—Third Term, 2 theoretical and 4 practical periods per week.

25. Crop Production. This course is intended only for those students who are specializing in agronomy. It consists of field and laboratory work in the study of the handling of fall-sown and fall-harvested crops. Great attention is given in this course to a careful note-taking and study of the results obtained in breeding work in corn and other fall maturing crops on the Experiment Station farm.

Junior Year—First Term, 2 theoretical and 4 practical periods per week.

Second Year—First Term, 3 theoretical and 4 practical periods per week; Third Term, 2 theoretical and 2 practical periods per week.

26. Farm Machinery. Lectures and practical work.

Senior Year—First Term, 2 theoretical and 4 practical periods per week.

First Year—Third Term, 2 theoretical and 4 practical periods per week.

27. Advanced Work in Crop Production and Soils. In this course a detailed study is made of the methods of Crop Production. The work in Soils is designed to familiarize the student with the details of soil management. It includes a study of the effects of the most approved systems of tillage and crop rotations upon the physical and chemical composition of the soil and its moisture content. The laboratory work consists of special studies on the type soils of Maryland, soils from the Experiment Station fields, which have been subjected to various systems of soil management, and samples of soils from the student's home farm.

Senior Year—First and Third Term, 3 theoretical and 4 practical periods per week.

28. Grain Judging. This course consists of a critical comparative study of the cereals and other farm seeds from the standpoint of market grading and fitness for seed purposes. It is designed so to familiarize the student with the subject that he may not only handle his own crops to the best advantage, but may also be qualified to act as a judge at county fairs, grain shows, etc. Instruction is given by means of laboratory practice and lectures.

Senior Year—Second Term, 4 practical periods per week.

Second Year—Second Term, 2 theoretical and 4 practical periods per week.

29. Farm Management. Lectures and practical work.

Senior Year—Third Term, 2 theoretical and 4 practical periods per week.

Second Year—First Term, 2 theoretical and 2 practical periods per week.

30. Thesis and Research. To be arranged for with the head of the Department.

Senior Year—First Term, 1 theoretical and 4 practical periods per week; Second Term, 4 practical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

GEOGRAPHY.

COURSES OFFERED.

31. PHYSICAL GEOGRAPHY. A general view of natural phenomena and their mutual relations.

Preparatory Year—Second Term, 4 practical periods per week.

ANIMAL HUSBANDRY.

PROFESSOR RUFFNER.

The Department of Animal Husbandry stands for all lines of work which pertain to the judging, selecting, breeding, feeding, development, care and management of the various breeds and classes of domesticated animals. Good herds of stock are being established at the Maryland Agricultural Experiment Station which are of use to the student in his studies. In addition to the supply of stock on the farm the proximity of the College to Washington and Baltimore makes it possible for the student to get excellent material for study. The Heurich dairy farm, close by, furnishes an excellent example in dairy farming. It is quite evident that there is but one way to make a young man a proficient judge of live stock, and that is by training the eye. In all of the lecture and laboratory work outlined in the courses the work is demonstrated with living specimens.

New dairy barns are erected at the Experiment Station. These are models of sanitation. A well lighted and heated pavilion for judging live stock is a recent addition to the equipment.

Junior and Senior Students taking this course are sent to farms throughout the State of Maryland, and the eastern section of Virginia to supervise advanced registry tests for the dairy associations. These trips give the students the advantage of observing

the most up-to-date dairy farms in the country, in addition to practical experience.

For the past three years a judging team, consisting of three students, has been sent to Chicago to participate in the Student's Contest in Judging Dairy Cattle. Students in any of the agricultural courses are eligible to compete for a place on this team. The selection of students for the team is based upon ability and efficiency in this line of work.

A growing library of herd-books is available to the student of pedigrees. These books give a fund of information concerning heredity, fecundity and other breed characteristics.

COURSES OFFERED.

40. Elementary Animal Husbandry. This course consists of lectures and practical demonstrations in the judging, selecting and feeding for specific purposes of certain classes of domestic animals, together with a very elementary course in dairying.

Preparatory Year—First Term, 2 practical periods per week.

41. Breeds and Scoring. This course is devoted to the detailed study of the breeds of live stock. The practical work commences with a study of the animal form by the use of the score-card. Special attention is given to the relation of form to function. First, the productive types are firmly fixed in the student's mind; then he takes up more particularly breed characteristics.

Text-books: "Types and Breeds of Farm Animals," by Plumb and "Judging Live Stock," by Craig.

Freshman and First Year—First Term, 1 theoretical and 4 practical periods per week.

Junior Year—First Term, 2 theoretical and 4 practical periods per week.

42. Farm Buildings. This course has for its object the development of proper ideas in the construction and arrangement of buildings for the housing of stock; the storage of food materials, animal and dairy products; and incidentally the storage of harness and implements. Convenience, economy and proper sanitation are especially considered in the study of plans and location.

The course is made as practical as possible by the study of plans, specifications and photographs of existing structures, and by drawing simple plans to express individual ideas.

Freshman and First Year—Second Term, 4 practical periods per week.

43. Live Stock Management. Lectures are given on the housing, feeding, care and management of dairy cattle, hogs and horses; the housing, feeding, care and management of beef cattle and sheep. The practical work consists of application of the principles developed in the lectures, and takes up the drawing of barn plans and other stable conveniences.

Sophomore Year—First Term, 2 theoretical and 4 practical periods per week.

44. Principles of Breeding. This course takes up the principles of breeding, including selection, heredity, atavism, variation, fecundity, in-and-in breeding, cross-breeding and a historical study of the results.

Text-books: "Principles of Breeding," Davenport, "Breeding Farm Animals," Marshall.

Junior and Second Year—First Term, 3 theoretical periods per week.

45. Animal Nutrition. This course embraces the principles and practice of animal feeding. After covering the principles of nutrition, it takes up the composition of feeding stuffs, their combination into properly balanced rations, and the relation between the sustenance of animals and their products. Students entering this course should have completed courses in organic chemistry and comparative anatomy and physiology.

Text-books: "Feeds and Feeding," Henry, "Feeding of Animals," Jordan.

Junior Year—Second Term, 4 theoretical and 2 practical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

Senior Year—First Term, 3 theoretical and 4 practical periods per week; Third Term, 3 theoretical and 2 practical periods per week.

Second Year—First and Second Term, 2 theoretical periods per week.

46. Stock Judging. Special attention is paid to the judging of groups of animals, similar to county and State fair work.

Junior Year—Third Term, 1 theoretical and 4 practical periods per week.

Second Year—First Term, 4 practical periods per week.

47. Dairying. Lectures, recitations and practical work.

Text-books: Wing's "Milk and Its Products," Russell's "Dairy Bacteriology."

Senior Year—Second Term, 2 theoretical and 4 practical periods per week.

Second Year—Third Term, 2 theoretical and 4 practical periods per week.

48. Profitable Stock Feeding. This course treats of the feeding of animals in a most practical manner. Special attention is given to the feeding of breeding stock and the fattening of animals for market. There is no special requirement to enter this course, as in course 45.

Text-books: "The Management and Feeding of Cattle," by Thomas Shaw, "Profitable Stockfeeding," by Smith.

Second Year—Second Term, 4 practical periods per week.

49. Farm Poultry. This course takes up the methods of housing, artificial incubation, artificial breeding, feeding of chicks, feeding of laying hens and diseases of poultry.

Text-book: "Poultry Craft," by Robinson.

Senior and First Year—Second Term, 2 theoretical periods per week.

50. Research and Thesis. The lines of work and subjects to be investigated are to be arranged with the head of the Department.

The object of this work is to develop independence and originality in the student, and also to give him a taste for personal investigation upon lines which are of particular interest to himself. The results of these investigations are usually incorporated in a thesis.

Senior Year—First Term, 1 theoretical and 4 practical periods per week; Second Term, 4 practical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

BOTANY AND VEGETABLE PATHOLOGY.

PROFESSOR NORTON.

ASSOCIATE PROFESSOR SMITH.

The courses in botany are intended to give such knowledge of the vegetable kingdom as is a proper element in general culture; to train the student mind in observation, comparison, generalization and other mental processes essential to true scientific methods in any work; and to furnish a basis for practical studies directly connected with agriculture, since plants are the subjects dealt with in the field and garden. In addition to the courses in pure botany, others of special economic trend are given. These are specially for students in the Agricultural and Horticultural Courses, and take up such botanical studies of cultivated plants, plant diseases, etc., as may be useful in practical life to the professional farmer or gardener.

The equipment and means for illustration and demonstration consist of a reference library containing the principal botanical works needed by students, charts and maps, compound and dissecting microscopes, preserved specimens for illustration and a representative collection of Maryland plants; microtome and other instruments together with reagents and apparatus for histological work and physiological experiments; and a culture room, sterilizers, incubators and other facilities for the study of plant diseases.

Advanced students have an opportunity to observe the work being done in the laboratory of Vegetable Pathology and greenhouse of the State Horticultural Department and of the Experiment Station, and, if competent, to assist in the same. Special attention is given to students who wish practice in the treatment of plant diseases, as it is the desire of the Department to encourage young men to engage in this work as a business.

COURSES OFFERED.

60. PLANT LIFE. The course gives the student an idea of the following courses in botany, and is to aid him in deciding later in what studies he wishes to specialize.

Preparatory Year—Third Term, 2 practical periods per week.

61. ELEMENTARY BOTANY. The students familiarize themselves with the commoner plants and their names; and discussions of their ecology and economic importance are taken up.

Sub-Freshman Year—First Term, 2 practical periods per week.

62. SEEDS AND WEEDS. By examination and careful study the student becomes familiar with the ordinary field and garden seeds, and with the weed seeds which are commonly found as adulterants. He is thus enabled to identify these at sight. A study of the common weeds is also pursued.

First Year—First Term, 4 practical periods per week.

63. GENERAL PRINCIPLES. This is an elementary course in the general principles of anatomy, morphology and physiology of the higher plants. The structure and types of seed, root, stem, leaves, flowers and fruit are studied in the laboratory, with a brief consideration of the functions of the different plant organs, a more complete course in plant physiology (66) being given later.

There is also field work, with the manual on the native flora, designed to give a knowledge of the common Maryland plants and their position in the classification of the vegetable kingdom. The ecology of the plants examined in the field is also considered, and includes their relation to soils, water supply, light and other factors in their environment, cross pollination, dissemination of seeds, plant societies, etc. Each student makes a collection of plants from some part of the State.

Bergen and Caldwell's "Practical Botany" is the principal textbook used.

Reference books: Gray's "Field, Forest and Garden Botany," Britton's "Manual," Gray's "New Manual," Britton and Brown's "Illustrated Flora."

Freshman Year—Third Term, 2 theoretical and 4 practical periods per week.

64. FARM BOTANY. Work similar to that given in 63, with special reference to the agricultural side of botany.

First Year—Third Term, 2 theoretical and 4 practical periods per week.

65. PLANT HISTOLOGY. Laboratory work with the compound microscope, studying the minute structure of the tissues and organs of the various types of plants. Each student prepares a series of

sections for study with the microscope, from which he makes a set of outline drawings.

Steven's "Plant Anatomy" and Chamberlain's "Methods in Plant Histology" are the principal books used.

Sophomore Year—First Term, 1 theoretical and 6 practical periods per week.

66. Plant Physiology. Lectures and experiments on the life processes of plants; absorption and transfer of water and food materials, photosynthesis, respiration, growth, movement and reproduction. Special attention is given to the relation of physiological principles to agriculture.

Text-books: Barnes' "Physiology," Osterhaut's "Experiments with Plants."

Sophomore Year—Second Term, 1 theoretical and 6 practical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

67. Comparative Morphology and Classification. A comparative study of the structure and life history of the principal types of plants from the lowest to the highest, based on microscopic studies in the laboratory.

Text-book: Bergen and Davis' "Principles of Botany," Part II. The outline of classification of Engler's "Syllabus" is followed in general.

Junior Year—First Term, 6 practical periods per week.

68. Economic Plants. Lectures are given on the names, classification, nativity and uses of the useful and detrimental plants of the world, and field and laboratory studies are made of the common cultivated plants. This is done with a view to enabling the student of horticulture or agriculture to know the scientific names and relationship of the plants with which he comes in contact in his chosen work.

Reference works: Bailey's Gray's "Field, Forest and Garden Botany," Bailey's "Encyclopedia of Horticulture," etc.

Junior Year—Second Term, 2 theoretical and 4 practical periods per week.

69. Seed Analysis. Practical work in testing seeds for purity and viability, including all methods used in the State Seed Laboratory located at the Experiment Station.

Junior Year—Second Term, 1 theoretical and 4 practical periods per week.

70. Microscopy of Foods and Drugs. The identification of various food and drug products and their adulterants by means of the microscope.

Junior Year—Third Term, 2 theoretical and 4 practical periods per week.

71. Plant Diseases. A practical study of diseases of plants to enable the student to know them and to understand the methods of control.

Second Year—Third Term, 2 theoretical and 2 practical periods per week.

72. Vegetable Pathology. This includes microscopic and macroscopic examinations of parasitic fungi in their relations to diseases in higher plants, studies of the nature of disease in plants, physiological diseases, etc., together with the best known means for the prevention and control of diseases. Lectures, reference work, laboratory work and experiments in infection and treatment constitute the course.

Junior Year—Third Term, 2 theoretical and 4 practical periods per week.

73. Vegetable Pathology. This course is an extension of course 72 and is required of Biological students specializing in botany.

Junior Year—Third Term, 1 theoretical and 4 practical periods per week.

74. Elective courses for students of the Biological Course and for post-graduate students are offered in Methods in Plant Pathology, Botanical Microchemistry, Histology of Trees, Weeds and Poisonous Plants, Seed Testing, Taxonomy or advanced work in any of the undergraduate courses before mentioned.

Senior Year—7 theoretical and 12 practical periods per week.

75. Research. Students electing botany as a major in the Senior Year devote a portion of their time to the completion of an original study of some botanical subject upon which they prepare the graduation thesis. The time scheduled is a minimum.

Senior Year—1 theoretical and 4 practical periods per week.

CHEMISTRY AND BACTERIOLOGY.

PROFESSOR MCDONNELL.

ASSOCIATE PROFESSOR RROUGHTON.

MR. GOWEN.

MR. LAMSON.

This Department is charged with two distinct classes of work. (1) The State fertilizer, feed and lime inspection, and (2) the instruction of students. The State work necessitates the publication of the "Quarterly" bulletin, which is usually made up of the results of the analysis of fertilizers, feeding stuffs, or agricultural lime, and is sent free of charge to all Maryland farmers who apply. Students do no part of the State work, the assistants being college graduates. However, this work serves as a valuable object lesson to the advanced students.

The Chemical Laboratory Building is devoted entirely to chemistry. Not including basement, it is two stories high. On the first floor are the laboratories for the State fertilizer, feed and lime control work, office, lecture room and balance room. On the second floor are three laboratories for the use of students—one for each class—a students' balance room with first-class chemical and assay balances, polariscope, refractometers, spectroscopes, etc., and a supply room. The assay furnaces are in the basement. Each student is provided with a working desk, lockers, reagents and apparatus. Additional apparatus and materials are provided from the supply room, as needed.

The Department is provided with a small, but well-selected, library of standard reference books on chemistry, to which additions are made from time to time.

Instruction in chemistry is begun in the Second Term of the Freshman Year, three to four periods per week being devoted to lectures and recitations, and two to four periods to practical work in the laboratory by the student, under the supervision of the instructor. In this way he comes in direct contact with the substances studied, having at hand ample facilities for learning their properties. Special attention is given to the elements and compounds of practical and economic importance, such as the air, water and soil, the elements entering into the composition of plants and

animals, the useful metals, etc. This course is intended to give the student that practical and theoretical knowledge of elementary chemistry which is essential in the education of every man, no matter what his vocation. It also serves as a foundation for advanced work in chemistry, if such a course is chosen.

Advanced work in chemistry begins with the Sophomore Year, Second Term, if the Course in Chemistry is selected, and the larger part of the student's time is devoted to some branch of theoretical or practical chemistry during the rest of his course, as outlined elsewhere.

CHEMISTRY.

COURSES OFFERED.

80. FARM CHEMISTRY. This course consists of an elementary course in general chemistry, with special reference to the chemistry of plants, animals, fertilizers, etc., and is offered to students taking the two-year courses in Agriculture and Horticulture.

Text-book: Kahlenberg and Hart's "Chemistry in Its Relations to Daily Life."

Second Year—2 theoretical and 2 practical periods per week.

81. GENERAL CHEMISTRY. Recitations and practical work in the laboratory, where the student performs the experiments under the direction of the instructors. Qualitative analysis is started in this course.

Text-book: Remsen's "Introduction to the Study of Chemistry."

Freshman Year—Second and Third Terms, 4 theoretical and 2 practical periods per week.

Sophomore Year—First Term, 3 theoretical and 4 practical periods per week.

82. QUALITATIVE ANALYSIS. Lectures and laboratory work.

Text-book: Hind's "Qualitative Analysis."

Sophomore Year—Second Term, 8 practical periods per week; Third Term, 1 theoretical and 8 practical periods per week.

83. QUALITATIVE ANALYSIS. For students taking the Agricultural, Horticultural, Biological and General Science Courses.

Text-book: Hind's "Qualitative Analysis."

Sophomore Year—Second Term, 1 theoretical and 8 practical periods per week.

84. Quantitative Analysis. For students taking the Agricultural, Biological and General Science Courses. A brief course illustrating some of the general principles in the quantitative study of chemistry. In the latter part of the course the agricultural students are given the option of the analysis of fertilizers, feeds, butter, milk, etc.

Text-book: Lincoln and Walton's "Quantitative Analysis."

Sophomore Year—Third Term, 1 conference and 8 practical periods per week.

85. Theoretical Chemistry. A discussion of the fundamental laws and theories of modern chemistry.

Text-books: Remsen's "Theoretical Chemistry," and Talbot and Blanchard's "Electrolytic Dissociation Theory."

Sophomore Year—Third Term, 2 theoretical periods per week.

86. Mineralogy. This is a course in determinative mineralogy. The more important minerals are identified by their more characteristic physical and chemical properties, the blow-pipe being an important aid.

Text-book: Brush and Penfield's "Determinative Mineralogy and Blowpipe Analysis."

Sophomore Year—Third Term, 1 theoretical and 4 practical periods per week.

87. Geology. Attention is given chiefly to physical geology. The latter half of the course is devoted to the geology of Maryland, specially as affecting the character of the soils, mineral wealth and other economic conditions of the State. Instruction is given by means of text-book work, lectures and field excursions.

Junior Year—First Term, 2 theoretical and 2 practical periods per week; Second Term, 2 theoretical periods per week.

88. Organic Chemistry. For students taking the Agricultural, Biological and General Science Courses. Recitations and lectures.

Text-book: Remsen's "Organic Chemistry."

Junior Year—First Term, 4 theoretical periods per week.

89. STOICHIOMETRY. Problems relating to analytical and applied chemistry.

Text-book: Miller's "Analytical Calculations."

Junior Year—1 theoretical period per week.

90. QUANTITATIVE ANALYSIS. Consisting of Gravimetric and Volumetric Determinations. Determinations are selected, so as to illustrate the general principles of the work. The volumetric work consists of acidimetry, alkalimetry, iodometry, oxidation and reduction. Neatness and accuracy are insisted upon in the laboratory, and in the conference periods the chemistry and mathematics of each determination are thoroughly discussed.

Text-books: Olsen's "Quantitative Analysis," Sutton's "Volumetric Analysis."

Junior Year—First Term, 1 theoretical and 12 practical periods per week; Second Term, 1 theoretical and 10 practical periods per week; Third Term, 1 theoretical and 8 practical periods per week.

91. ORGANIC CHEMISTRY. The chemistry of carbon compounds.

Text-books: Perkin & Kipin's "Laboratory Manual" and Gattermann's "Practical Methods of Organic Chemistry," translated by Schober.

Junior Year—First Term, 3 theoretical periods per week; Second and Third Term, 3 theoretical and 4 practical periods per week.

92. AGRICULTURAL CHEMISTRY. The chemistry of soils, fertilizers, plant life, animal life, etc.

Text-book: Ingle's "Manual of Agricultural Chemistry."

Senior Year—First Term, 4 theoretical periods per week.

93. AGRICULTURAL CHEMICAL ANALYSIS. This is a thorough course in the analysis of fertilizers and fertilizing materials, feeding stuffs, butter, milk, sugar, starch, etc.

Senior Year—First Term, 20 practical periods per week.

94. PHYSIOLOGICAL CHEMISTRY. Recitations and lectures.

Text-book: Hawk's "Physiological Chemistry."

Senior Year—First Term, 4 theoretical and 4 practical periods per week.

95. INDUSTRIAL CHEMISTRY. The study of the practical methods employed in the various chemical industries. Visits are made to

ice, fermentation, and gas plants; also to fertilizer, glass, iron and steel works; etc.

Text-book: Thorp's "Outlines of Industrial Chemistry."

Senior Year—Second and Third Term, 3 theoretical periods per week.

96. Physical Chemistry. In this course the student becomes familiar with the advanced theories of chemistry, and some of the methods employed by research chemists. The laboratory work consists of the determination of the boiling and melting point, lowering of the freezing point by substances in solution, determination of vapor densities and combustion methods for determination of carbon, hydrogen and nitrogen.

Text-book: Jones' "Physical Chemistry."

Senior Year—Second Term, 3 theoretical and 20 practical periods per week; Third Term, 3 theoretical periods per week.

97. Advanced Agricultural Analysis.

Text-book: "Methods of Analysis of the Association of Official Agricultural Chemists."

Senior Year—Third Term, 16 practical periods per week.

98. Thesis. Investigation along agricultural chemical lines to be embodied in a graduating thesis. In addition to the time scheduled, a part of the work done under courses 94, 95 and 96 will be included.

Senior Year—Third Term, 2 theoretical periods per week.

BACTERIOLOGY.

COURSES OFFERED.

100. Bacteriology. Methods of studying bacteria, sterilization, preparation of culture media, staining, etc. Study of various types of bacteria along morphological and biochemical lines. A thorough training in fundamental bacteriological technique. In connection with the laboratory work, a discussion of Ehrlich's theory of immunity and a demonstration of some phenomenon relating to the application of the theory.

Junior Year—Second Term, 8 practical periods per week.

Senior Year—Second Term, 8 practical periods per week.

101. BACTERIOLOGY. A continuation of course 100, including methods of anaerobic cultivation, with the practical application of bacteriology to the bacteriological examination of water, milk, soil, etc. The intimate relation existing between this and all other agricultural sciences makes it a valuable course for a student in any branch of agriculture.

Junior Year—Third Term, 8 practical periods per week.

Senior Year—Third Term, 8 practical periods per week.

102. ELEMENTARY BACTERIOLOGY. A brief course is offered the students attending the two-year courses in Agriculture and Horticulture. Special emphasis is placed upon the methods of determining the bacterial content of milk, its source, its significance and its control.

Second Year—Second Term, 2 practical periods per week.

CIVIL ENGINEERING.

PROFESSOR TALIAFERRO.

MR. SPRINGER.

The subjects pertaining to civil engineering are arranged with the object of emphasizing the fundamental principles through lectures and recitations in the class-room, supplemented by practical exercises in the field, drafting room and laboratory. Self-reliance being an essential factor in the success of an engineer, the student is encouraged in every way to develop this habit.

EQUIPMENT. In addition to minor engineering instruments, etc., the Department is at present equipped with three compasses, four transits and four levels.

The experimental laboratory contains a thousand pound Riehle cement testing machine and a hundred thousand pound Riehle machine for making tensile and other tests of the various kinds of materials. A description of this latter machine will be found on page

74, it having been purchased for the use of the Civil and Mechanical Engineering Departments. A description of the drafting and blue print rooms used by the Civil Engineering Department will also be found on page 75.

Some hydraulic apparatus of a character suited to the needs of the Department has been installed and other apparatus will be purchased as the funds permit.

TOURS OF INSPECTION—During the session members of the Senior and Junior classes, accompanied by an instructor, take trips for the purpose of making an examination of the different types of modern engineering construction.

COURSES OFFERED.

The subjects outlined, with one exception, constitute a portion of the curriculum of students in the Civil Engineering Course.

120. GENERAL ENGINEERING DRAWING. Isometric and cabinet projections. Perspective. Water coloring. Paper stretching. Blue printing. Ornamental lettering, round writing and title work. Floor plans, elevations and architectural details. Mapping contours and profiling. Conventional signs.

Freshman Year—First Term, 4 practical periods per week.

Junior Year—First and Second Term, 6 practical periods per week; Third Term, 4 practical periods per week.

121. SURVEYING. This course includes the use and adjustment of engineering instruments, the methods of land surveying, the plotting and computing of areas, dividing of land, the theory of the stadia, true meridian lines, leveling, topographical surveying, railroad curves and cross sectioning.

Texts: Hosmer and Breed's "The Principles and Practice of Surveying," and Pence & Ketchum's "Field Manual."

Freshman Year—Second Term, 2 theoretical periods per week; Third Term, 4 practical periods per week.

Sophomore Year—First Term, 4 practical periods per week; Second Term, 4 theoretical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

Junior Year—First Term, 2 theoretical and 4 practical periods per week.

122. MECHANICS. A study of statics, dealing with the composition and resolution of forces, moments, couples, machines and laws of friction; and of dynamics, dealing with velocity, acceleration, laws of motion, work, energy and applications to problems.

Junior Year—First Term, 4 theoretical periods per week.

123. RAILWAY ENGINEERING. A study is made of preliminary and location surveys, cross sectioning, calculation of quantities, etc.

Text: Allen's "Railroad Curves and Earthwork."

Junior Year—Second and Third Term, 3 theoretical periods per week.

124. BRIDGE AND STRUCTURAL DESIGN. This course includes the complete design and detailing of a steel roof truss and a plate girder; the detailing from standard commercial drawing sheets of floor beams, girders and columns; and the complete design of a bridge truss of either the Warren or Pratt type. The stresses are determined by both analytical and graphic methods.

Texts: Merriman and Jacoby's "Stresses," Cooper's "Bridge Specifications," "Cambria Hand Book," Thompson's "Bridge and Structural Design," Merriman and Jacoby's "Bridge Design."

Junior Year—Second and Third Term, 2 theoretical and 4 practical periods per week.

125. MECHANICS OF MATERIALS. This course treats of the elasticity and resistance of materials of construction, and the mechanics of beams, columns and shafts.

Text: Merriman's "Mechanics of Materials."

Junior Year—Second Term, 3 theoretical periods per week; Third Term, 5 theoretical periods per week.

126. SURVEYING. This course is intended, primarily, to meet the needs of students in the Agricultural and Horticultural Courses. It includes the use of the compass, transit and level, one or more methods of land surveying, the plotting and computing of areas, leveling and topographical surveying.

Text: To be selected.

Junior Year—Third Term, 2 theoretical and 4 practical periods per week.

127. PRACTICAL PROBLEMS. The necessity for practical work on the part of those desiring to enter upon engineering as a profes-

sion is obvious. To meet this condition a number of hours have been scheduled for field and laboratory work in practical problems relating to engineering. The laboratory work includes the testing of cement and other materials of construction, various hydraulic experiments, the operation of engines, etc. The scheduled hours constitute a minimum, the student being encouraged to give as much more of his time as is possible to problems of this character.

Junior Year—Third Term, 8 practical periods per week.

Senior Year—First Term, 12 practical periods per week; Second and Third Term, 4 practical periods per week.

128. CONCRETE. A study of cement, concrete, and reinforced concrete construction.

Text: Hools "Reinforced Concrete Construction."

Senior Year—First Term, 4 theoretical periods per week.

129. HYDRAULICS. The principles of hydraulics, flow through pipes, water supply, etc., are discussed in this course.

Text: Lea's "Hydraulics."

Senior Year—First Term, 3 theoretical periods per week; Second Term, 5 theoretical periods per week.

130. ESTIMATES OF COST. Lectures are given on the methods of estimating cost and these are supplemented by problems of a practical nature.

Senior Year—Second Term, 1 theoretical and 4 practical periods per week; Third Term, 2 practical periods per week.

131. HIGHWAY ENGINEERING. This course includes the location, construction and maintenance of roads.

Text: Blanchard and Drowne's "Highway Engineering."

Senior Year—Third Term, 5 theoretical periods per week.

132. THESIS. This involves a study of some selected problem in engineering.

Senior Year—Second Term, 4 practical periods per week; Third Term, 8 practical periods per week.

ECONOMICS, POLITICAL SCIENCE AND HISTORY.

PROFESSOR BOMBERGER.

The course in this Department are specially designed to prepare young men for the active duties of citizenship. The first

year of the Collegiate work is devoted to the study of modern history, which is followed by the principles of civil government, constitutional history, political economy (with especial reference to current, social, rural and industrial problems), and, finally, the elements of business and international law.

ECONOMICS AND POLITICAL SCIENCE.

COURSES OFFERED.

140. CIVIL GOVERNMENT. Study of the history and development of the Constitution of the United States.

Text used: Beard's "American Government and Politics."

Junior Year—First and Second Term, 3 theoretical periods per week.

141. BUSINESS LAW. Principles of law as practically applied in everyday life and business.

Text used: Huffcut's "Elements of Business Law."

Junior Year—Third Term, 3 theoretical periods per week.

142. BUSINESS LAW. A course for the students in the two-year Agricultural and Horticultural Courses on the principles of law as practically applied in everyday life and business.

Text used: 'Hamilton's "Practical Law."

Second Year—Second Term, 3 theoretical periods per week.

143. POLITICAL ECONOMY. Principles of political economy and industrial development of the United States; rural economics; social science; and current problems.

Text used: Seager's "Introduction to Economics."

Senior Year—4 theoretical periods per week.

144. COMPARATIVE GOVERNMENT. Study of the governments of the leading nations of Europe. Elective.

Text used: Ogg's "Governments of Europe."

Senior Year—First Term, 4 theoretical periods per week.

145. MUNICIPAL GOVERNMENTS. Study of typical modern municipal governments of the United States and Europe. Elective.

Senior Year—Second Term, 4 theoretical periods per week.

146. INTERNATIONAL LAW. Elements of international law. Elective.

Text used: Davis' "Elements of International Law."

Senior Year—Third Term, 4 theoretical periods per week.

147. RURAL ECONOMICS. Special study of rural economic problems. Elective.

Senior Year—4 theoretical periods per week.

HISTORY.

COURSES OFFERED.

160. UNITED STATES HISTORY. A study of the chief epochs of American history.

Text used: Adams and Trent's "History of the United States."

Preparatory Year—First and Second Term, 5 theoretical periods per week.

161. ENGLISH HISTORY. Outlines of English history.

Text used: Andrew's "Short History of England."

Preparatory Year—Third Term, 5 theoretical periods per week.

162. GENERAL HISTORY. Outlines of general history.

Text used: Myer's "General History."

Sub-Freshman Year—First Term, 2 theoretical periods per week; Second and Third Term, 3 theoretical periods per week.

163. MODERN EUROPEAN HISTORY. From the treaty of Westphalia to the present time.

Text used: Robinson and Beard's "Development of Modern Europe.'

Freshman Year—3 theoretical periods per week.

164. AMERICAN HISTORY. Political and economic history of the United States with special reference to the nineteenth century.

Sophomore Year—First and Second Term, 4 theoretical periods per week; Third Term, 3 theoretical periods per week.

165. ADVANCED HISTORY. Selected topics. Elective.

Junior Year—3 theoretical periods per week.

ELECTRICAL ENGINEERING AND PHYSICS.

PROFESSOR CREESE.
MR. KAH.

ELECTRICAL ENGINEERING.

The work of the Electrical Engineering Course is so arranged as to give the student a thorough understanding of the fundamental principles of the various branches of electrical engineering, and at the same time to teach him to apply these principles to the practical problems with which the engineer has to deal. This purpose is carried out by means of lectures and recitations in the class-room, supplemented by practical work in the laboratories and drawing room.

EQUIPMENT. The Electrical Engineering Laboratories are located in the east wing of the new engineering building. The rooms on the first floor are used for lectures, recitations and experimental demonstrations by the instructor; a room on the second floor is equipped with apparatus for experimental work in telephone engineering; and the basement contains the dynamo room and the electrical engineering testing room.

The electrical engineering testing room is fitted up with such appliances as are used to the best advantage in engineering practice. Special effort has been made to purchase only the best instruments, as the use of poorer grades influences the student unfavorably. With poor instruments he cannot be taught to do satisfactory work and he becomes careless in the handling of them.

Among other things the following apparatus has been purchased for the testing laboratory:

A Leeds and Northrup potentiometer and Weston standard voltmeter and ammeter for calibrating the various measuring instruments used in the laboratory. A Sharp-Millar portable photometer and a Queen & Co. standard photometer for measuring the candle-power of lamps and for determination of illumination intensities. A large number of portable ammeters, voltmeters, and indicating wattmeters for direct and alternating current measurements; standard curve drawing voltmeter and ammeter; electrostatic voltmeter; frequency meters; silver and copper voltameters; Siemen's

type electrodynamometer; watthourmeters, both direct and alternating current. A Leeds and Northrup standard portable testing set; heating devices; condensers; tachometers; multiple circuit ammeter and voltmeter switches. D'Arsonval galvanometers; standard resistance boxes and bridges, including a very accurate decade resistance box and a decade resistance and Wheatstone bridge; double and single contact keys, condenser keys, etc.

The lamps used for experimental purposes include direct and alternating current multiple carbon arc, magnetic arc, mercury, vapor and nernst lamps.

A Curtis steam turbine, direct connected to a 35-kilowatt compound generator, has been installed for testing purposes. This may be used in connection with the College lighting plant when needed, and will be used for light and power service in the engineering building.

The laboratory is so wired that connection may be made readily with any part of the College lighting plant, with the turbo-generator or with any of the apparatus in the dynamo room.

The apparatus in the dynamo room includes the following: A 10-kilowatt rotary converter of the latest type with speed limit and end play devices. A 5 horse-power variable speed commutating pole motor. A 7.5 kilowatt, 60 cycle, 220 volt alternator designed to operate either as a polyphase generator, synchronous motor, frequency changer, constant speed induction motor, or variable speed induction motor; the following parts are supplied with the set to make possible its operation in any of the above named ways;—a stationary armature for use either as an alternating current generator or as an induction motor field; a revolving field; a squirrel cage induction motor rotor with starting compensator having self-contained switches; an induction motor rotor with internal starting resistance; and an induction motor rotor with 3 phase collector rings, external resistance, and controller. A 2 kilowatt booster set, consisting of a series motor and shunt generator with armatures mounted on the same shaft. A 5 horse-power compound direct current motor and a 1.5 horse-power shunt motor fully enclosed. A 7.5 kilowatt, 120 volt, 3 phase self-excited generator direct connected to a 115 volt compound direct current motor. A motor-generator

set consisting of a 3.6 horse-power shunt motor direct connected to a 2 kilowatt compound generator. A 3 horse-power, 3 phase induction motor. A 0.5 kilowatt shunt generator belt connected to a 0.5 horse-power variable speed shunt motor. Two 2 kilowatt transformers to transform power from 110 or 220 volts to 1100 or 2200 volts. Various types of starting rheostats with automatic overload and no voltage release; field rheostats.

The main switchboards, consisting of two blue Vermont marble panels on pipe supports, are used to mount the necessary circuit breaker, rheostats, switches, etc., to control the generators and motors as well as the various circuits in the dynamo room and testing laboratory. Wire and water rheostats are arranged for load and regulation. Portable lamp-boards are so arranged that they may receive, at the proper voltage, from 0.04 to 100 amperes current. Portable ammeter, voltmeter and wattmeter switchboards have been constructed for use in machine tests. In addition to the special electrical engineering equipment, the College lighting plant will be used for illustrative and experimental purposes. This plant contains, together with other apparatus useful in teaching electrical engineering, two Bullock generators of 40 kilowatts total capacity, and a switchboard equipped with a number of Weston ammeters, voltmeters and circuit breakers, and various types of rheostats.

An 8-inch Waltham bench lathe, with all the necessary attachments, has been installed in the dynamo room for the use of students in practical thesis work, and for making small articles, such as binding posts, connectors, etc., for use in the laboratories.

The telephone laboratory is equipped with two demonstration sets which were made by the Western Electric Co.

The magneto set consists of an oak panel upon which is mounted the following apparatus: Two line circuits with combined jacks and signals; double wound supervisory drops; complete cord circuits including ringing and listening keys, operator's telephone set, magneto generator, etc. On one line circuit is connected a wall type subscriber's set, and on the other, a desk set.

The common battery set consists of an oak panel carrying the following equipment: Two line circuits with lamp signals; com-

plete cord circuits, including ringing and listening keys, operator's telephone set, magneto generator, split repeating coils, condensers, retardation coil, supervisory lamp, etc. On one of the line circuits is connected a wall type subscriber's set, and on the other a desk set.

Both panels have all the wiring exposed to enable the student to make a complete study of these two principal types of telephone exchanges.

COURSES OFFERED.

The subjects outlined constitute the work in electrical engineering.

180. ELEMENTARY ELECTRICITY. This subject includes static electricity, dealing with the phenomena of electricity in its potential form, and the conception of electric potential, quantity, capacity, etc.; kinetic electricity, including the study of the fundamental laws and units, as Ohm's Law, Joules' Law, units of current, electromotive force, resistance, etc.; theory of magnetism, with its phenomena and forces; and electro-magnetism, which is the foundation for dynamo electric machine design and construction.

Text: Nichols and Franklin's "Electricity and Magnetism."

Sophomore Year—Second and Third Term, 3 theoretical and 2 practical periods per week.

181. ELEMENTARY ELECTRICITY AND MAGNETISM. This subject is given to enable the student to gain a general knowledge of the applications of electricity to commercial work, and deals very little with the mathematical theories of the various laws and principles. The subject includes a study of the methods of generating, distributing and utilizing electrical energy for practical purposes, and is intended to make the student familiar with modern electrical apparatus and machinery.

Text: Jacksons' "Elementary Electricity and Magnetism."

Sophomore Year—Third Term, 2 theoretical periods per week.

182. ELECTRO-MAGNETISM AND CONSTRUCTION OF DYNAMOS. Beginning with the Junior Year and extending throughout the course, the principles involved in the construction and operation of both direct and alternating current dynamos and motors are

taught. In teaching this subject, special care is exercised that the mathematical and graphical developments shall be concise and logical. The direct current machine is first examined, and this results in a discusion of the different forms of armatures, their windings, cores, commutators, etc.; the various fields; the methods of arranging the windings for different purposes; the shape and material of the magnetic circuits; the bearings, shafts, and bed-plates; the methods of insulation; a full description of the materials of construction; the selection of types suited to the performance of specific duties; and the proper method for installing and operating. The characteristic curves and efficiencies of the different types are also illustrated at some length.

Text: Franklin and Esty's "Dynamo Electric Machinery."

Junior Year—First and Third Term, 3 theoretical periods per week; Second Term, 4 theoretical periods per week.

183. Electrical Engineering Laboratory. The study of direct current instruments. The measurements of resistance, current, and electromotive force; the use of the Wheatstone Bridge and galvanometers; loop and capacity tests of cables; calibration of instruments; study of direct current machines; testing of arc lamps; photometry; the operation of machinery and determination of the characteristic curves and efficiencies of machines.

Junior Year—6 practical periods per week.

184. Primary and Secondary Batteries. The theories involved in the primary cell are developed and attention is directed to the various measurements and calculations pertaining to the subject. A study is made of the construction and use of the latest types of commercial cells.

Following the preliminary work on the primary cell, the study of the lead storage battery is taken up in detail. The work includes the general theory, the mechanical construction and the commercial use of the various types of cells, together with the chemical and electrical actions encountered. In connection with the storage cell a study is made of the construction and use of the different forms of the auxiliary apparatus, such as end-cell switches, boosters, etc.

Text: Lyndon's "Storage Battery Engineering."

Junior Year—Third Term, 2 theoretical periods per week.

185. Electric Machine Design. Practical calculation of dynamos, including detail calculations of field cores, armature windings, frames, commutator, armature core and collecting devices.

Junior Year—Third Term, 6 practical periods per week.

Senior Year—First Term, 6 practical periods per week.

186. Alternating Currents and Alternating Current Machinery. A complete study is made of the fundamental phenomena and theories dealing with the effects of alternating currents, both single-phase and poly-phase. Included in this course there are a large number of problems, both analytical and graphical, which are specially valuable for giving a clear appreciation of the effects of self-inductance, mutual-inductance, and capacity in single-phase and poly-phase alternating current circuits.

The theory, construction and practical applications of single-phase and poly-phase alternating current machinery, which includes generators, synchronous, induction and repulsion motors, rotary convertors, transformers, regulators, etc., are taken in detail.

The fundamental principles of the machinery are developed in the class-room and applied concurrently in the laboratory and designing room with special reference to their practical utilization.

Texts: Franklin and Esty's "Alternating Currents," McAllister's "Alternating Current Motors," and Karapetoff's "Electric Circuit."

Senior Year—First and Third Term, 5 theoretical periods per week; Second Term, 3 theoretical periods per week.

187. Electrical Engineering Laboratory. The determination of inductance, impedance, condensance, etc.; measurement of power in alternating current circuits; regulation and efficiency tests of alternators and transformers; parallel operation of alternators; phase characteristics, power factor, etc., of synchronous motors; polyphase transformation; mesh and star connections of transformers; tests of induction and synchronous motors.

Senior Year—First and Second Term, 8 practical periods per week; Third Term, 6 practical periods per week.

188. Electric Lighting and Power Plants. This work begins with the study of the different systems of distribution used in arc and incandescent lighting, and the discussion of the advantages

and disadvantages of each from both financial and engineering standpoints. Attention is given to the best methods of obtaining good regulation, as upon this satisfactory lighting service depends. The proper arrangement and wiring of switchboards and the instruments which they contain, as well as the latest methods of protection from lightning, are treated in detail.

The student is made familiar with the manufacture and characteristics of the incandescent arc and many new forms of electric lamps; the selection of lamps for specific commercial duties; the principles underlying correct interior and exterior illumination; the manufacture of cables for underground work; and the materials used in overhead and conduit systems of distribution.

The proper arrangement, the type and the size of boilers, engines and dynamos in a central station for lighting and power purposes, are obtained by the study of typical plants in this country and abroad. Many problems involving the calculation of the wire and materials needed for the various system of distribution are given. These problems require for their solution a knowledge of the rules of the Underwriters' Association.

Text: Franklin's "Electric Lighting."

Senior Year—First Term, 3 theoretical periods per week.

189. Electric Power Plants and Transmission. A study of the principles underlying the lay-out of power-house and sub-station machinery and circuits for high tension transmission and distribution systems, including the determination of the most economical size of conductors for such systems. The course includes numerous original and practical problems illustrating the principles.

Senior Year—Second Term, 3 theoretical periods per week.

190. Telephones and Telegraphs. This subject deals with the applications of electricity to telephony and telegraphy, with the details and construction of the instruments, switchboards and line work. In this course are included a study of telephone receivers and transmitters; the multiple switchboard; common battery circuits; manual and automatic exchanges; traffic regulation; intercommunicating systems; line construction; the effects of self-inductance, capacity and other disturbing influences; location of faults; simplex, duplex and quadruplex telegraphy; wireless telegraphy; and simultaneous telegraphy.

Text: Miller's "American Telephone Practice."

Senior Year—Second and Third Term, 2 theoretical and 2 practical periods per week.

191. ELECTRIC MACHINE DESIGN. This work includes the design of reactance coils, transformers, induction motors, alternator armatures, field windings and frames, and special problems in the transmission of power.

Senior Year—Third Term, 1 theoretical and 6 practical periods per week.

192. ELECTRIC RAILWAY ENGINEERING. The student is made thoroughly familiar with the following topics relating to electric railway work; the power, capacity, arrangement and methods of installation of the engines and boilers; the type, method of control and disposition of the generators in the dynamo room; the proper arrangement of the switchboards and the instruments to be used; the line work, including the various trolley and conduit constructions; the method of laying the track, with the weight and bonding of the rails; the motor equipment and car wiring; the type, power and control of the motors and the requirements for special conditions; the applications of the storage battery; the cost of installation and operation of the power plant; the management of the plant; and the modifications required for high speed electric traction.

Text: Sheldon and Hausman's "Electric Traction and Transmission Engineering."

Senior Year—Third Term, 3 theoretical periods per week.

193. THESIS. During the Senior Year each student is required to prepare a graduation thesis. In the preparation of the thesis the student is given the opportunity to apply his training to original research.

Senior Year—Second and Third Term, 4 practical periods per week.

PHYSICS.

The physical lecture room and laboratory are located in the new engineering building, in rooms excellently adapted to the purpose.

The Department is well supplied with apparatus for lecture room demonstrations and for students' individual laboratory work, and new pieces of apparatus are added to the equipment each year.

COURSES OFFERED.

200. ELEMENTARY PHYSICS. The course consists of lectures, recitations and experimental demonstrations by the instructor on mechanics, hydrostatics, sound, heat, light, electricity and magnetism. The student is required to work a number of problems, and his attention is directed to the practical application of the principles studied.

Text: Carhart & Chute's "Principles of Physics."

Sub-Freshman Year—3 theoretical periods per week.

201. PHYSICS. The course begins with a review of mechanics, after which heat, electricity and magnetism, sound and light, are taken up successively by lectures, recitations, problems and demonstrations. A knowledge of the elements of plane trigonometry is required for entrance. The laboratory work consists of a series of experiments, mainly quantitative, designed to illustrate and verify the laws and principles considered in the class-room and to develop in the student skill in manipulation and accuracy in making precise measurements.

Texts: Carhart's "College Physics" and Ames and Bliss' "Manual of Experiments in Physics."

Sophomore Year—First Term, 3 theoretical and 2 practical periods per week; Second and Third Term, 3 theoretical and 4 practical periods per week.

202. PHYSICS. Advanced work will be provided for students who have completed the preceding courses, and who wish to continue the study of physics.

ENGLISH AND PUBLIC SPEAKING.

PROFESSOR RICHARDSON.

MR. BYRD.

This Department, as its name implies, covers the work of two closely allied branches.

The course in English, of a necessity, lies at the base of all other courses of instruction. Clear and comprehensive knowledge of his mother tongue is absolutely necessary to the student in pursuing any line of college work. Nor is this all; for aside from the practical value of the English instruction as an aid to other branches of study, and as a preparation for business and profession, it is to his training in this Department, in connection with his study of history, the classics and modern languages, that the student must look for the acquiring of the general culture which has always been the distinguishing mark of the liberally educated man. The English work, which is common to all courses, consists of the study of the structure of the English language, English and American literature, theoretical and practical rhetoric, critical reading and analysis, and constant exercise in expression, composition and theme writing.

The work in public speaking is begun with easy lessons in elocution, and this is continued until the student has acquired a mastery of vocal expression, and a pleasing and forcible delivery. The student is then required to deliver both extempore and prepared speeches and debates, covering a wide range of subjects, in this way not only securing practice in delivery, but also developing the power of logical thought.

COURSES OFFERED.

220. PREPARATORY ENGLISH. Technical grammar, spelling and composition writing.

Text used: Maxwell's "Exercise in English."

Preparatory Year—5 theoretical periods per week.

221. PUBLIC SPEAKING. Such instruction and practice as will enable the students to read correctly and intelligently.

Preparatory Year—2 practical periods per week.

222. SUB-FRESHMAN ENGLISH. Thorough review of technical grammar, practical word analysis, composition and letter writing.

Texts used: Marshall's "Business Speller" and Hitchcock's "Enlarged Practice Book in English Composition."

Sub-Freshman and First Year—5 theoretical periods per week.

223. PUBLIC SPEAKING. Review of work in the Preparatory Year and declamations of simple selections.

Sub-Freshman Year—2 practical periods per week.

224. FARM LITERATURE. A reading course in farm periodicals and other agricultural literature, with instruction in the taking and systematization of notes. This course is also open as an elective to the Short Winter Course students during their stay at the College.

First and Second Year—2 practical periods per week.

225. COMPOSITION. Practice in English composition. Work consists of twelve themes, discussing subjects involved in special technical work.

Second Year—1 theoretical period per week.

226. RHETORIC, COMPOSITION AND PUBLIC SPEAKING. A study of the principles and practice of rhetoric and composition. Work in rhetoric consists of a study of diction, the sentence, the paragraph, the discourse, the nature and structure of prose and poetry. Work in composition consists of twelve themes, especially adapted to the needs of the class.

The work in public speaking is a part of the English course, and consists of readings and declamations given for the purpose of developing within the student the ability to understand what he reads, and the power to interpret the author's meaning.

Text used: Brooks & Hubbard's "Composition and Rhetoric," Hart's "Rhetoric," Swinton's "Word Analysis."

Freshman Year—4 theoretical and 2 practical periods per week.

227. COMPOSITION. Practice in English composition. Special lectures. Preparation of twelve themes on selected subjects.

Sophomore Year—1 theoretical and 2 practical periods per week.

228. PUBLIC SPEAKING. Lectures on ancient and modern orators, with readings and declamations from their orations. Extempore speeches. Original orations on subjects requiring careful and intelligent research. Debates.

Sophomore Year—2 practical periods per week.

229. AMERICAN LITERATURE. A study of the most important American writers and their works, with selected readings.

Aside from giving an accurate knowledge of American literature, this course is specially intended to increase the vocabulary of the student, promote facility of expression, and develop the power of original thought.

Text used: Halleck's "American Literature," Bronson's "American Poems."

Sophomore Year—First and Second Term, 2 theoretical periods per week.

230. ENGLISH LITERATURE. A study of the history of English literature and the lives of the principal writers, with selected readings from English authors, orators and poets.

Text used: Long's "English Literature," Newcomer and Andrew's "Twelve Centuries of English Poems and Prose."

Sophomore Year—Third Term, 2 theoretical periods per week.

Junior Year—First and Second Term, 2 theoretical periods per week.

231. ADVANCED COMPOSITION. Advanced work in English composition. Nine themes, six of which will be connected with the student's technical work. In theme writing the different technical departments and the English department work conjointly.

Junior Year—First and Second Term, 1 theoretical and 2 practical periods per week; Third Term, 1 theoretical period per week.

232. PUBLIC SPEAKING. Writing and delivering original speeches on subjects specially adapted to the future requirements in the vocation of the student. Debates on current subjects.

Junior Year—2 practical periods per week.

233. ENGLISH. Special topics given to students in the General Science Course.

Junior Year—First Term, 2 practical periods per week; Second Term, 1 theoretical and 2 practical periods per week.

234. PUBLIC SPEAKING. Special work given to students in the General Science Course.

Junior Year—Third Term, 1 theoretical period per week.

235. ENGLISH COMPOSITION. Special themes illustrating the principles of debate, oration and short story.

Senior Year—1 theoretical period per week.

236. PUBLIC SEAKING. Individual instruction in writing and delivering orations and debates. Elective.

Senior Year— 4 theoretical periods per week.

237. ADVANCED ENGLISH LITERATURE. Detailed study of the literature of the nineteenth century. This course is offered to students in the General Science Course. Elective.

Senior Year—4 theoretical periods per week.

ENTOMOLOGY AND ZOOLOGY.

PROFESSOR SYMONS.
ASSOCIATE PROFESSOR CORY.

Instruction is given in this Department with a view first, to giving the student the general knowledge of invertebrate and vertebrate zoology, which is necessary as a foundation science for an agricultural education; second, to fit the student in elementary and advanced entomology, both economic and systematic, so that he may pursue this specialty after graduation. A course in economic entomology and zoology is also given to provide those students who are specializing in any of the allied agricultural sciences, with the information which is essential to their ideal development.

Students who intend to enter the medical profession or work in public health and sanitation will find in the Biological Course the work which will give them the best possible preparation for those professions.

Students wishing to take advanced work in invertebrate zoology are advised to select some subject in entomology. As the State and Experiment Station entomological work is conducted through this Department, there are special advantages for students in applied entomology.

The reference library is unusually complete, containing in addition to the standard works, a majority of the principal entomological and zoological publications. The laboratory is supplied with

a large collection of insects for the use of students, and is well equipped with microscopes and other apparatus necessary for practical work in entomology and zoology.

The glass and screen insectaries of the State Horticultural Department and the Maryland Experiment Station are joined to the laboratory, and afford facilities for special investigation to a limited number of advanced students. In addition, a greenhouse 50 x 20 in the new range of houses has been set aside for entomological work.

A laboratory of the Bureau of Entomology has been established at the Experiment Station. The Parasitologist in charge is available for consultation by students specializing in parasitic Hymenoptera.

COURSES OFFERED.

240. Animal Life and Elementary Entomology. A consideration of animals and insects from a nature study standpoint. These courses are designed to show the student the importance of these subjects and to develop and foster an interest in nature.

Preparatory Year—First Term, 2 practical periods per week.

Sub-Freshman Year—Third Term, 2 practical periods per week.

241. General Zoology. This course is offered to all students taking agriculture and allied sciences, and is introductory to all other work in this Department. A study is made of the general form, characteristics, habits and classification of animals from the lowest to the highest forms. It is designed to give the student that knowledge of animal life without which his education is incomplete.

Freshman Year—First Term, 2 theoretical and 4 practical periods per week.

242. Invertebrate Zoology. In this course a thorough study will be made of the anatomy, development and classification of invertebrate animals. Special attention is given to those forms which are intimately associated with the development of allied sciences.

Sophomore Year—First and Second Term, 2 theoretical and 4 practical periods per week.

243. General Entomology. This course is offered all students who have completed course 241. It consists of a study of insects, their classification, structure and relation to man. The practical work will consist of laboratory studies of the structures of typical forms, and a study in the field of the habits of insects, particularly those which are injurious to crops.

As an aid to this study, the student is required to make a collection of the more common insects which appear in the spring.

Sophomore Year—Third Term, 2 theoretical and 4 practical periods per week.

244. Economic Entomology. This course will embrace a detailed study of the life histories of insects of economic importance and the most approved means of control. Practical work will be given in the preparation and application of insecticides and the operation of spraying machinery, of which the Department has a large assortment.

Junior Year—First Term, 2 theoretical and 4 practical periods per week.

245. Economic Entomology. This course is an expansion of course 244 and is required of students in the Biological Course specializing in entomology.

Junior Year—First Term, 1 theoretical and 4 practical periods per week.

246. Vertebrate Zoology. A thorough study of the structure, development, classification and distribution of vertebrates is made in this course. Special attention is given to birds and other vertebrates of economic importance.

Junior Year—First Term, 1 theoretical and 6 practical periods per week; Second Term, 1 theoretical and 4 practical periods per week.

247. Systematic Entomology. This is designed for students in the Biological Course specializing in entomology. It will consist of a comparative study of insect structures, particularly those used in the arrangement of insects into natural groups.

Junior Year—Second Term, 1 theoretical and 4 practical periods per week; Third Term, 2 theoretical and 4 practical periods per week.

248. Systematic Entomology. This course is an expansion of course 247 and is required of students in the Biological Course specializing in entomology.

Junior Year—Third Term, 1 theoretical and 4 practical periods per week.

249. Farm Zoology. This course is offered to students in the First Year of the two-year courses. It includes a study of reptiles, birds, mammals and other animals of economic importance which commonly occur on the farm.

First Year— Third Term, 2 theoretical periods per week.

250. Insecticides and Spraying. Special attention is given in this course to the principles involved in the application of insecticides. A study is made of the different insecticides and spraying apparatus on the market. In the practical work an opportunity will be given to observe and operate a large number of the spraying machines and apparatus which are offered for sale. A special spraying laboratory has been fitted for students taking this course.

Second Year—Second Term, 2 theoretical and 2 practical periods per week.

251. Insect Pests. This course is designed for students in the two-year courses and the various short courses, previous courses in entomology not being prerequisite. The course includes a study of insects from the standpoint of general farm practice.

Second Year—Third Term, 2 theoretical and 4 practical periods per week.

252. Advanced Entomology. This includes courses open to students specializing in entomology.

(a) Insect Anatomy. A study is made of methods of insect histology in connection with a study of the gross and microscopic anatomy of the body of an insect.

(b) Wing Venation. This course involves a study of the homologies of the wing veins of the several groups of insects, showing how the natural relation of those groups may be traced by means of the veins.

Additional elective courses for students in the Biological Course and for post-graduate students are offered in Insect Taxonomy,

Morphology and Ecology, Experimental Methods and Insect Delineation.

Senior Year—7 theoretical and 12 practical periods per week.

253. APPLIED ENTOMOLOGY. This course is given students in the Horticultural Course who have completed course 244. It includes a more detailed study of some of the insects with which the trained horticulturist will have to deal, a consideration of the spraying methods used in large fruit plantings, and the control of insect pests in greenhouses and florists' establishments.

Senior Year—Third Term, 2 theoretical and 4 practical periods per week.

254. ANIMAL PARASITES. This course is designed especially for students specializing in animal husbandry. The course involves a discussion of the life history and habits of the more important internal and external parasites of domestic animals. It also includes a study of the treatment employed in the control of these pests.

Senior Year—Third Term, 2 theoretical and 4 practical periods per week.

255. ENTOMOLOGICAL RESEARCH. Independent research on some definite problem in entomology, the results of which are usually incorporated in the graduation thesis.

Senior Year—1 theoretical and 4 practical periods per week.

HORTICULTURE.

PROFESSOR SYMONS.
PROFESSOR BECKENSTRATER.
PROFESSOR MONROE.
DR. BESLEY.
ASSOCIATE PROFESSOR ANSPON.
MR. BURRELL.

Recognizing the great importance of every phase of this subject in the State, a SCHOOL OF HORTICULTURE has been formed in conjunction with the State Horticultural Department, with a view of offering instruction to students desiring to specialize in either Pomology, Vegetable Culture or Landscape

Gardening and Floriculture. The courses in this subject have been therefore revised, providing for general courses in all phases of Horticulture during the Freshman and Sophomore years and permitting them to specialize in either of the above subjects in the Junior and Senior years.

The arrangement of the courses is, of necessity, subject to such adjustment as will advance the best interests of the students. The object in each course will be to give practical and theoretical training in fruit growing, truck farming and commercial landscape gardening and floriculture. Under the present arrangement the specialists in each subject will have greater opportunity to keep familiar with the progress of their work through the practical demonstration and experimental work in the State. Where one man has been required to give all the instruction in horticulture heretofore, four men are now available to give a part of their time to this important work.

The students will be required to do practical work throughout the course, and in addition, they must have spent at least two summers or the equivalent, during the four years' course, in an approved commercial establishment dealing with the subject in which they are specializing. The equipment of each Department is being steadily increased and the orchards, gardens and greenhouses of College and Experiment Station afford unlimited opportunities for practical observation. In addition, the students of each course will be expected to take trips to selected commercial orchards, truck farms, greenhouses and markets.

The SCHOOL OF HORTICULTURE offers two regular courses: (a) A four-year course leading to the degree of Bachelor of Science; (b) a two-year course for proficiency in which a Certificate is awarded.

The work given in the two-year course will also be more efficient, as for the most part the courses will be given separately from those of the regular four-year students. These students will also have an opportunity to specialize in any phase of horticulture in which they are interested during their second year.

POMOLOGY.

260. Introductory Horticulture. This is an introductory course designed to acquaint the student with the materials and problems with which horticulture deals, and to present to the prospective student the field of horticulture as a possibility in which he may find a future career.

Preparatory Year—Third Term, 2 practical periods per week.

261. Elementary Pomology. An introductory course dealing with the principles of the subject. It is intended for all students in agriculture and horticulture, and is prerequisite to all the courses in pomology. Lectures, recitations and practical exercises.

Freshman Year—Third Term, 2 practical periods per week.

First Year—First Term, 2 theoretical and 4 practical periods per week.

262. Principles of Pomology. A continuation of course 261. A study of the methods of propagation, pruning and planting.

Sophomore Year—First Term, 2 theoretical and 4 practical periods per week.

First Year—Second Term, 2 theoretical and 4 practical periods per week.

263. Principles of Small Fruit Culture. An elementary course dealing with the general principles of small fruit growing, including a study of cultural requirements, propagation and the relative importance of the different small fruits for home use and market.

Sophomore Year—Second Term, 2 theoretical and 2 practical periods per week.

264. Commercial Pomology. This course considers the harvesting, packing, storing and marketing of fruits. Special stress is given to transportation and market problems. The leading commercial varieties of fruits are also studied. Lectures, recitations and practical exercises.

Junior and Second Year—First Term, 2 theoretical and 2 practical periods per week.

265. Practical Small Fruit Culture. Practical directions for the production and handling of strawberries, grapes and bush

fruits for home use and market, including a study of crop rotation and fertilization.

Junior Year—Second Term, 2 theoretical and 4 practical periods per week.

First Year—Third Term, 2 theoretical and 2 practical periods per week.

266. Practical Pomology. A study of the orchard sites, soils, varieties and planting plans for the orchard; cultivation, cover crops, fertilizers and pruning as practiced in commercial orchards.

Junior Year—Second Term, 2 theoretical and 4 practical periods per week; Third Term, 2 theoretical and 2 practical periods per week.

Senior Year—Second Term, 1 theoretical and 6 practical periods per week.

267. Commercial Small Fruit Culture. A study of methods of harvesting, packing and marketing small and bush fruits and grapes. Special attention is given market problems and shipping associations.

Junior Year—Third Term, 2 theoretical and 4 practical periods per week.

268. Systematic Pomology. This course embraces a study of the evolution and relationship of the economic fruits. It includes descriptions of fruit and the identification of the more common varieties of Maryland. Fruit judging and the selection of fruits for exhibition purposes are also considered. Lectures, recitations and practical exercises.

Senior Year—First Term, 2 theoretical and 4 practical periods per week; Second Term, 1 theoretical and 4 practical periods per week.

269. Viticulture. A course in commercial vineyarding, including a consideration of sites, soils, propagation, pruning, training and cultural methods. Also a study of the manufacture of unfermented grape juice and wine-making.

Senior Year—First Term, 2 theoretical and 2 practical periods per week.

270. Literature of Fruit Growing. History and growth of horticultural writings. A study of important publications, current horticultural periodicals and methods of research.

Senior Year—Second Term, 1 theoretical and 2 practical periods per week.

271. Nut Culture. This course is designed to cover the subject in a general way; it includes the propagation, orchard management and marketing of the leading American nuts.

Senior Year—Second Term, 2 theoretical and 2 practical periods per week.

Second Year—Second Term, 2 theoretical periods per week.

272. Citrus and Sub-Tropical Fruits. A general course in citrus and sub-tropical fruits of commercial importance.

Senior Year, Second Term, 3 theoretical periods per week.

273. Plant Breeding. A general course in the science and art of plant breeding. Observed factors in organic evolution, variation and heredity are considered in so far as they have a bearing upon this subject. The discussion of the various methods of breeding and improvement are accompanied by practice in the orchard and greenhouses.

Senior Year—Second Term, 2 theoretical periods per week; Third Term, 2 theoretical and 2 practical periods per week.

274. Advanced Small Fruit Culture. A continuation of course 267, taking up the history, evolution and location of the principal small fruit sections, and a discussion of varieties, planting, training, care and fertilization.

Senior Year—Third Term, 2 theoretical and 2 practical periods per week.

275. Advanced Pomology. Special problems in adaptation, propagation, cultivation anad pruning as they arise in commercial orchards.

Senior Year—Third Term, 2 theoretical and 2 practical periods per week.

276. Research Work and Thesis. This course is given to test and develop the student's power of observation and initiative. The work will be arranged with each student, individually, and the re-

sults will be written up in form of a thesis, which is required of all candidates for the Bachelor of Science Degree.

Senior Year—First Term, 2 practical periods per week; Second and Third Term, 6 practical periods per week.

277. Post-Graduate Work. An opportunity for advanced work is given to candidates who have the Bachelor of Science Degree.

VEGETABLE CULTURE.

280. Vegetable Gardening. This course includes the general principles of vegetable culture, and a study of the home garden. The home garden is studied specially, because students in other departments do not get another opportunity to take up this work.

Freshman Year—Second Term, 2 practical periods per week.

First Year—Second Term, 1 theoretical and 4 practical periods per week.

281. Practical Vegetable Growing. A course designed to carry out as far as possible in a practical way the different phases of vegetable culture. The student will be expected to assist in starting plants under glass and growing crops in the field.

Sophomore Year—Third Term, 1 theoretical and 4 practical periods per week.

282. Vegetable Growing Under Glass. The use of the different glass structures in vegetable culture. Forcing vegetables and growing winter crops in the greenhouse.

Junior Year—First Term, 1 theoretical and 4 practical periods per week; Second Term, 2 theoretical and 8 practical periods per week; Third Term, 6 practical periods per week.

Second Year—First Term, 2 theoretical and 4 practical periods per week; Second Term, 4 practical periods per week.

283. Literature of Vegetable Culture. History and development of vegetable crops. The methods of breeding used in bringing about this development. A study of current vegetable publications.

Junior Year—Second and Third Term, 2 theoretical periods per week.

284. VEGETABLE CULTURE AND ITS RELATION TO THE CANNING INDUSTRY. Special reference to the vegetable crops and varieties grown for canning.

Junior Year—Third Term, 2 theoretical periods per week.

Second Year—First Term, 2 theoretical periods per week.

285. MARKET GARDENING. A continuation of courses 280 and 281. Prerequisites, courses 280 and 281. This course includes growing, harvesting, grading, packing and marketing commercial vegetable crops. It also includes a systematic study of some of the more important commercial varieties. Whenever possible, trips will be made to markets and vegetable farms.

Senior Year—First Term, 2 theoretical and 6 practical periods per week; Second Term, 6 theoretical and 12 practical periods per week; Third Term, 6 practical periods per week.

Second Year—Third Term, 4 practical periods per week.

286. EXPERIMENTAL VEGETABLE CULTURE. A study of Experiment Station methods. The planning of definite experiments and estimating approximate requirements for carrying on vegetable experiments.

Senior Year—Third Term, 2 theoretical and 4 practical periods per week.

287. RESEARCH AND THESIS. The prime object of this work is to test the student's power of observation and initiative. The individual student will be required to select some special line of research in vegetable culture and submit the same to the head of the Department for approval not later than April first of the Junior Year. The results must be written up for a thesis required for graduation.

Senior Year—First Term, 1 theoretical and 4 practical periods per week; Second Term, 2 theoretical and 12 practical periods per week; Third Term, 1 theoretical and 8 practical periods per week.

LANDSCAPE GARDENING AND FLORICULTURE.

300. PRINCIPLES OF LANDSCAPE GARDENING. An elementary course dealing with the principles of landscape gardening and their application to home grounds.

Freshman Year—First Term, 1 theoretical and 2 practical periods per week.

First Year—First Term, 2 theoretical and 2 practical periods per week.

301. Ornamentation of Home Grounds. Continuation of course 300. This course deals more in detail with the beautifying of home surroundings.

Sophomore and Second Year—Second Term, 2 theoretical periods per week; Third Term, 4 practical periods per week.

302. Greenhouse Management. This course is devoted to the soil, culture and methods of handling greenhouse crops.

Junior and Second Year—First Term, 2 theoretical and 2 practical periods per week.

303. Floral Decoration. The use of cut flowers and plants in decorations, baskets and designs.

Junior Year—Second Term, 2 practical periods per week.

304. Floriculture. Forcing plants and flowers for wholesale and retail markets; methods of handling and marketing the crops.

Junior Year—Second and Third Term, 2 theoretical and 4 practical periods per week.

Second Year—Third Term, 2 theoretical and 4 practical periods per week.

305. Greenhouse Construction. A study of the types of houses, cost, materials and methods of heating and ventilating used for growing plants.

Junior Year—Second Term, 2 theoretical and 2 practical periods per week.

Second Year—First Term, 2 theoretical and 2 practical periods per week.

306. Plant Materials. This course comprises a study of the characters, habits, culture and suitability for landscape work of trees, shrubs and perennials, together with their planting and arrangement.

Junior and Second Year—Third Term, 2 theoretical and 2 practical periods per week.

307. Tree Surgery. A course in the treatment of trees and shrubs, including technical details in pruning to control insect enemies and fungus diseases.

Senior Year—First Term, 1 theoretical and 4 practical periods per week.

308. Landscape Design. A course dealing with the composition of public parks and private grounds, with practical work in planning and designing.

Senior Year—First Term, 2 theoretical and 6 practical periods per week.

309. Civic Art. This course deals with the principles of landscape gardening as applied to city, village and rural design and improvement.

Senior Year—Second Term, 2 theoretical and 2 practical periods per week.

310. Planting Plans. This course deals with planting designs and plans, and detailed planting plans for public and private grounds.

Senior Year—Second Term, 2 theoretical and 6 practical periods per week.

311. Aesthetics of Landscape Gardening. A course dealing with the underlying principles designed to give the student a broad conception of the art.

Senior Year—Second Term, 2 theoretical periods per week.

312. Landscape Practice. This course takes up the study of grading plans and working drawings, together with specifications and contracts.

Senior Year—Second Term, 2 theoretical and 8 practical periods per week.

313. History and Literature of Landscape Gardening. A reference course dealing with the literature and the different stages of development of the art.

Senior Year—Third Term, 2 theoretical periods per week.

314. Garden Flowers. A course in annuals, herbaceous perennials, bulbous plants, and shrubs used in ornamental plantings and for cut flowers.

Senior Year—Third Term, 2 theoretical and 4 practical periods per week.

315. FLORICULTURE. This course, which is given to students in the Agricultural Education Course, includes window gardening, culture of flowers upon home grounds, soils, fertilizers, potting and shifting of plants, and the use of cut flowers in table decorations.

Senior Year—Third Term, 2 theoretical and 2 practical periods per week.

316. RESEARCH AND THESIS. The designing, planning and detail planting of some practical landscape problem, or some special phase of floriculture.

Senior Year—Second Term, 2 theoretical and 4 practical periods per week; Third Term, 12 practical periods per week.

FORESTRY.

The instruction in forestry is planned to give to the student, who is fitting himself to take up the practical problems of farm management, a sufficient knowledge of the principles of forestry to enable him to apply to the wood lot or timber tract, which is a part of practically every farm, the same degree of intelligent direction which he is prepared to give to the tilled lands and thus obtain equally satisfactory results.

The following course is offered:

320. FARM FORESTRY. This course includes forest botany, wood-management, measurement, valuation and utilization of forest crops, fire protection, nursery practice and tree planting. Lectures and field work.

Senior and Second Year—Third Term, 2 theoretical and 4 practical periods per week.

LANGUAGES.

PROFESSOR SPENCE.
MR. HARGROVE.

The Department of Languages embraces the study of three branches: Latin, German and French. All students are required

to take the courses in German or French. Students may elect to take Latin in the Freshman Year in place of History, provided that they have completed the work outlined for the Sub-Freshman Class or its equivalent.

The course of study in Latin is given with two ends in view—first, to train the mind into accurate and close methods of reasoning; second, to give the student a more thorough and comprehensive knowledge of his own language than he could otherwise acquire. Special attention is paid to Latin forms and terminations and to the derivation of English words from Latin roots.

So large a proportion of modern scientific literature is in German and French that a reading knowledge of these languages has become almost essential to the student pursuing advanced courses in the various spheres of scientific research. Instruction in these branches is given, therefore, to enable the student to translate intelligently the works of French and German masters in the domain of science, for, frequently there are no English versions of their works. As the student becomes more familiar with foreign scientific terms and construction, he is required to translate treatises bearing upon the special line of work which he may be pursuing.

LATIN.

COURSES OFFERED.

340. Grammar and Composition. The aim of this course which is given in the Preparatory Year, is to make the student conversant with Latin forms and terminations, and to enable him to read simple Latin prose.

Text-books: Collar and Daniel's "First Year Latin," or Bennett's "First Year Latin."

Preparatory Year—4 theoretical periods per week.

341. Syntax and Translation. Reading of Cæsar and Sallust with prose composition selected from the text read.

Text-books: Smith's "Latin Lessons," Harper and Tolman's "Commentaries of Caesar," and Scudder's "Sallust."

Sub-Freshman Year—3 theoretical periods per week.

Freshman Year—3 theoretical periods per week.

342. MYTHOLOGY, TRANSLATION AND LITERATURE. Reading of Virgil and Horace with lectures on mythology and Latin literature. Elective.

Text-books: To be selected later.

Sophomore Year—4 theoretical periods per week.

GERMAN.

COURSES OFFERED.

360. GRAMMAR AND CONVERSATION.

Text-book: Bacon's "German Grammar."

Freshman Year—3 theoretical periods per week.

361. TRANSLATION.

Text-books selected from the following: Hauff's "Das Kalte Herz," Schiller's "Der Neffe als Onkel," Wildenbruch's "Das Edle Blut" and "Der Letzte," Hillern's "Hoher als die Kirche," Grandgent's "Ali Baba and the Forty Thieves," Sybel's "Die Erhebung Europas," Walther's "Algemeine Meereskunde," Brant and Day's "Scientific German," Wallentin's "Grundzuge der Naturlehre," Moser's "Der Bibliothekar."

Sophomore Year—3 theoretical periods per week.

362. TRANSLATION. Selected readings from various literary and scientific texts and periodicals.

Junior Year—3 theoretical periods per week.

Senior Year—4 theoretical periods per week.

FRENCH.

COURSES OFFERED.

380. GRAMMAR AND COMPOSITION.

Text-book: Chardenal's "Complete French Course" (Revised), Aldrich & Foster's "Elementary French" and "French Reader," Super's "French Reader," and selected texts.

Freshman Year—3 theoretical periods per week.
381. TRANSLATION. Selections from standard authors.
Sophomore Year—3 theoretical periods per week.
382. TRANSLATION. Advanced texts. Prose composition.
Junior Year—3 theoretical periods per week.
Senior Year—4 theoretical periods per week.

MATHEMATICS.

PROFESSOR HARRISON.
MR. SPRINGER.

Mathematics is the basis upon which scientific information rests. A knowledge of the study is necessary, as much from the utilitarian point of view as from the mental training its acquisition gives. Its importance as a factor in our College course takes its rise from the former consideration. All instruction in this work is with a view to the equipping of students for the more practical work soon to follow.

The class work in mathematics in the several courses consists of arithmetic, bookkeeping, algebra, geometry (plane and solid), trigonometry, analytic geometry, differential and integral calculus, and their application to mechanics, engineering, physics and surveying.

No matter what vocation a man intends to follow, a knowledge of business forms and methods of systematic accounts is a requisite to success. To be able to use an ordinary compass or transit for the purpose of laying out, dividing and calculating the area of land, or running out lines and leveling for the purpose of drainage, is a necessary accomplishment for every intelligent farmer.

COURSES OFFERED.

400. ARITHMETIC. Review of problems involving mensuration, percentage, interest and proportion.
Text-book: Wentworth-Smith's.
Preparatory Year—2 practical periods per week.

First Year—First Term, 3 theoretical periods per week.

401. BOOKKEEPING. Brief course in double entry.

First Year—Third Term, 4 practical periods per week.

402. ALGEBRA. A thorough course in elementary algebra.

Text-book: Wentworth's.

Preparatory Year—5 theoretical periods per week.

Sub-Freshman Year—4 theoretical periods per week.

403. PLANE GEOMETRY. Books one to five, inclusive.

Text-book: Wentworth's.

Sub-Freshman Year—4 theoretical periods per week.

404. MATHEMATICS. Practical applications of the fundamental laws of elementary mathematics. Lectures will be given on the subjects considered in this course whenever they are deemed necessary.

Freshman Year—First Term, 2 practical periods per week.

405. SOLID GEOMETRY. Books six to eight, inclusive, with selected practical problems.

Text-book: Wentworth's.

Freshman Year—First Term, 4 theoretical periods per week.

406. TRIGONOMETRY. Deduction of formulas and practical applications of same in the solution of right and oblique triangles, etc.

Text-book: Wentworth's.

Freshman Year—Second Term, 5 theoretical periods per week; Third Term, 2 theoretical periods per week.

407. ADVANCED ALGEBRA. Elementary theory of equations, partial fractions, etc.

Text-book: Taylor's.

Freshman Year—Third Term, 3 theoretical periods per week.

408. ANALYTIC GEOMETRY. Geometry of two dimensions, loci of general equations of second order, higher plane curves, etc.

Text-book: Wentworth's.

Sophomore Year—First Term, 5 theoretical periods per week; Second Term, 3 theoretical periods per week.

409. CALCULUS. A discussion of the methods used in differentiation and integration, and the application of these methods in determining maxima and minima, areas, volumes, moments of inertia, etc.

Text-book: Bowser's.

Sophomore Year—Second Term, 2 theoretical periods per week; Third Term, 5 theoretical periods per week.

Junior Year—First Term, 5 theoretical periods per week.

MECHANICAL ENGINEERING.

PROFESSOR GWINNER.
ASSSOCIATE PROFESSOR CRISP.
MR. WARTHEN.

This Department offers a Course in Mechanical Engineering leading to the degree of Bachelor of Science in Mechanical Engineering. The list of all subjects required to be completed to obtain this degree is given on page 108. It prepares young men to design and construct machinery, to superintend engineering establishments, to become superintendents of construction and to teach mechanical engineering and manual training. For degree of Mechanical Engineer see page 125.

The record of its graduates shows that the course is equipping such for immediate usefulness in the technical field.

Instruction is given by means of lectures and recitations, accompanied by a large amount of practice in the drafting rooms, shops and experimental laboratory.

The program of the Department is arranged to embody the two-fold belief that a thorough training is best secured by a study of the practical application of the principles involved, as well as of the principles.

EQUIPMENT. The Mechanical Engineering Laboratories are situated in the engineering building, which contains the wood-working and machine shop, drafting and lecture rooms, foundry and blacksmith shops as well as the College power plant.

The wood-working shop contains accommodations for bench work and wood turning. The power machinery in this shop is a band and universal circular saw, five 12-inch turning lathes, one 16-inch by 10-foot pattern maker's lathe, a grindstone, wood trimmer, 26-inch wood planer and universal tool grinder.

In the forge shops are sixteen power forges, two hand forges and a pressure fan and exhauster for keeping the shop free of smoke. There is a full assortment of smith's tools for each forge.

The foundry is equipped with an iron cupola, which melts 1,200 pounds of iron per hour, a brass furnace, one core-oven and the necessary flasks and tools.

The machine shop equipment consists of one 10-inch speed lathe, one 22-inch engine-lathe with compound rest, one 12-inch combined foot and power lathe, two 14-inch engine-lathes, one 24-inch drill press, one No. 4 emery tool grinder, one No. 1½ universal milling machine, and an assortment of vises, taps, dies, pipe-tools and measuring instruments.

The machinery of the pattern and machine shops is driven by a 9 by 14-inch automatic cut off, high speed engine, built by members of the Junior and Senior Mechanical Engineering Classes, after the standard design of the Atlas engine. An 8 by 12-inch engine drives the machinery of the blacksmith shop and foundry. It was presented to the College by the City of Baltimore, and secured through the efforts of Rear-Admiral John D. Ford, United States Navy, retired.

The experimental laboratory contains: A hundred thousand pound Riehle combined hand and power testing machine for making tensile, compression, shearing and transverse tests on various kinds of materials, turbo generator set, consisting of a Curtis steam turbine and thirty-five K. W. General Electric compound wound generator for making steam and electric efficiency tests. This set is connected with the general lighting system of the College so that any time it may be tested to its capacity. It may also be used for lighting purposes if necessary. A cross compound condensing Corliss engine of fifty horse-power, equipped with brake, indicators, relief valves, reducing motion, steam and vacuum gauges, and speed indicator, gives ample opportunity for steam consumption and brake tests. This is connected with the shops, so that any time it may be switched on and drive them. The College power plant with its vacuum heating system, three one-hundred horse-power return tubular boilers, and two electric generating units offer unexcelled opportunities for experimental work.

The three drafting rooms are well equipped for practical work. Two of these are used by the Junior and Senior Classes, each student being provided with a separate desk. The third room is used jointly by the Freshman and Sophomore students and contains eleven drawing tables, accommodating about sixty students.

Engineering students are to provide themselves with approved drawing outfit, materials and book; the cost of which during the Freshman Year amounts to about $15.00. The cost to other students taking mechanical drawing is about $5.00. The College does not furnish these, but they are purchased by the student and are his property.

The combined blue print and dark room with its commodious printing frames affords splendid opportunities for sun printing, which is so useful to engineering students.

Contributions from the following enginering firms have been made to the department during 1913 and 1914:

The V. D. Anderson Co., Cleveland, Ohio. Full size working model of steam trap.

Warren Webster & Co., Camden, N. J. Samples of modulation and vacuum valves and blue prints of heating systems.

C. A. Dunham Co., Marshalltown, Iowa. Samples of vacuum radiator valves.

A. M. Byers Co., Pittsburg, Pa. Sample board illustrating results in different processes of pipe manufacture.

Stewart-Crook Hardware Co., Baltimore, Md. Exhibition case.

Tours of Inspection. The proximity of the College to Baltimore, Washington and Philadelphia, with their great industrial enterprises, offers unexcelled opportunities to engineering students to acquaint themselves practically with what is being done in modern engineering construction. Upon trips of inspection an instructor accompanies the class and explains the different processes, plants and machines.

COURSES OFFERED.

420. Freehand Drawing. Straight and curved lines, leaves, plants and ornaments. Lettering, drawing from geometrical solids and antique fragments in outline, and light and shade.

Preparatory Year—First and Second Term, 4 practical periods per week.

421. SHOPWORK. Exercise in sloyd, chip carving and bent iron work.

Preparatory Year—Third Term, 4 practical periods per week.

422. SHOPWORK. Sheet metal working in brass and iron.

Sub-Freshman Year—First Term, 4 practical periods per week.

423. FREEHAND DRAWING. Technical sketching. Pen and ink shading.

Freshman Year—First Term, 4 practical periods per week.

424. MECHANICAL DRAWING. Practice in plain lettering, use of instruments, projection and simple working drawings, the plates upon completion being enclosed in covers properly titled by the students.

Text-book: Tracy's "Mechanical Drawing."

Freshman Year—4 practical periods per week.

First Year—Second Term, 4 practical periods per week.

425. TECHNICAL INSTRUCTION. Explanation of the reading of mechanical drawings; the proper cutting angles, care and adjustment of carpenter tools; relative strength of wood joints; wood, its shrinking and warping, and how to correct and prevent. Drill in problems in arithmetic, algebra and drawing by notes and lectures.

Text-book: Goss' "Bench Work in Wood."

Freshman Year—First Term, 2 theoretical periods per week.

426. WOOD WORK. During the First Term is taught the use and care of bench tools, exercise in sawing, mortising, tenoning and laying out work from blue prints. The Second Term is devoted to projects involving construction, decoration and wood turning. During the Third Term the principles and process of pattern making are taught, together with enough foundry work to demonstrate the uses of pattern making.

Freshman Year—First Term, 6 practical periods per week; Second and Third Term, 4 practical periods per week.

First Year—Second Term, 4 practical periods per week.

427. DESCRIPTIVE GEOMETRY. Detailing of machinery and drawing to scale from blue prints. Tracing and blue printing, and representation of flat and round surfaces by ink shading. Its rela-

tion to mechanical drawing and the solution of such problems relating to magnitudes in space as bear directly upon those which present themselves to civil, electrical and mechanical engineers.

Text-books: Faunce's "Descriptive Geometry," Rouillion's "Mechanical Drawing."

Sophomore Year—First Term, 1 theoretical and 4 practical periods per week; Second Term, 2 theoretical and 6 practical periods per week; Third Term, 2 theoretical periods per week.

428. Blacksmithing. The making of the fire and how to keep it in order. The operations of drawing-out, upsetting and bending of iron and steel, including the calculations of stock for bent shapes. Welding. Construction of steel tools for use in the machine shop, including tool dressing and tempering. Annealing.

Sophomore Year—First and Second Term, 4 practical periods per week.

429. Technical Mechanics. Elementary principles of applied mechanics, calculations of gear and pulley trains, bent levers, calculation of belt lengths, lacing belts, the suction pump, and bolts and screws.

Text-book: Jamieson's "Mechanics."

Sophomore Year—Second Term, 2 theoretical periods per week.

430. Foundry Work. Moulding in iron and brass. Core making. The cupola and its management. Lectures on the selection of irons by fracture, fuels, melting and mixing of metals.

Sophomore Year—Third Term, 8 practical periods per week.

431. Steam Engines, Boilers and Dynamos. The principles of steam and the steam engine. The slide valve and valve diagrams. The indicator and its diagram. Steam boilers, the various types and their advantages. Each student taking this course is required to spend certain hours in the power plant actually operating the engines, boilers and dynamos. The theory of dynamos is given in course 182.

Text-book: Ripper's "Advanced Steam Engine."

Sophomore Year—Third Term, 3 theoretical periods per week.

432. Elementary Machine Design. Freehand sketching of the details of machinery and making working drawings of same. Calculations and drawings of a simple type punching press.

Text-book: Hoffman's "Machine Design."

Junior Year—First Term, 2 theoretical and 4 practical periods per week; Second Term, 2 theoretical and 6 practical periods per week; Third Term, 2 theoretical and 8 practical periods per week.

433. MACHINE WORK. Elementary principles of vise and machine work, which includes turning, planing, drilling, screw cutting and filing. This is preceded by study of the different machines used in the machine shops.

Junior Year—First and Second Term, 6 practical periods per week; Third Term, 8 practical periods per week.

434. GRAPHIC STATICS. The theory and practice of the method of determining stresses in cranes, roof trusses and bridges, and stress on beams and girders due to traveling loads.

Text-book: Merriman and Jacoby's "Graphic Statics."

Junior Year—Second Term, 4 theoretical periods per week.

435. STRUCTURAL DESIGN. Analysis of stresses in structural steel buildings, traveling cranes and derricks. Design of crane girders, lattice girders and roof trusses. In addition mechanical engineering students have design of cranes and civil engineering students have design of truss bridges and retaining walls. Both analytical and graphical methods are used, that being used which is best suited to problem.

Text-books: "Cambria Steel," Ketchum's "Steel Mill Buildings," Merriman's "Bridge Design," Thompson's "Bridge and Structural Design."

Senior Year—First and Second Term, 2 theoretical and 4 practical periods per week; Third Term, 2 theoretical and 6 practical periods per week.

436. MECHANICS OF ENGINEERING. The mechanics of solids. Statics of a material point and of rigid bodies. Chains and cords. Centrifugal and centripetal forces. Work. Power. Energy. Friction. Original problems. Theoretical hydraulics.

Text-book: Church's "Mechanics of Engineering."

Senior Year—First Term, 3 theoretical periods per week; Second and Third Term, 4 theoretical periods per week.

437. THERMODYNAMICS. Theory of heat, gases and vapors.

Heat engines. Air and refrigeration machinery. Principles of steam boilers, chimneys, steam piping and distribution of the same. The steam turbine.

Text-book: Peabody's "Thermodynamics," and Mark and Davis' "Steam Tables."

Senior Year—First Term, 2 theoretical periods per week; Second and Third Term, 3 theoretical periods per week.

438. HEATING AND VENTILATION. Principles and comparison of the different systems in common use. Elementary design of some one system.

Text-book: Hoffman's "Heating and Ventilation."

Senior Year—First Term, 2 theoretical and 2 practical periods per week.

439. EXPERIMENTAL ENGINEERING. Determining the amount of moisture in steam; the efficiency of the injector; the transit and its uses; indicator practice and the use of the planimeter; slide valve setting; the slide rule and micrometer; the analysis of boiler feed water; flue gases; lubricating oils; and the determination of the heating value of coals. The efficiency test of a Curtis steam turbine combined with that of an electric generator. The brake test and steam consumption of a cross compound condensing Corliss engine under varying loading. The testing of iron, steel and wood to determine their commercial values. The testing of cement to determine its tensile and compressive strength. All such tests must be written upon standard forms provided for each student.

Senior Year—First and Second Term, 8 practical periods per week; Third Term, 4 practical periods per week.

440. HYDROMECHANICS. Pumps and pumping machinery. Water supply engineering. Practical consideration of friction of water in pipes. Cost data of machinery. Notes and lectures.

Senior Year—Second Term, 3 theoretical periods per week.

441. THESIS. The time devoted to the problem selected as the subject for a thesis depends upon the difficulties involved in its solution. The time here stated is a minimum.

Senior Year—Second Term, 4 practical periods per week; Third Term, 2 theoretical and 8 practical periods per week.

MILITARY SCIENCE.

MAJOR DAPRAY.

The Congress of the United States, subject to certain conditions, now appropriates annually a generous sum for each Agricultural College of the United States.

One of the conditions imposed by this grant is that the students shall receive a course of training in Military Tactics.

The instructor for this course is supplied by the War Department and is an officer of the Regular Army, detailed from his Regiment or Corps for this duty.

The value of such military training may be considered from two viewpoints: First, that of the United States Government; and, second, that of the individual student.

To consider the first: The Government, depending as it does upon the citizen soldier for its Volunteer Army in times of national peril, realizes that an army, recruited from raw material as regards both officers and men, would be a most hopeless proposition in these days of quick action. If the officers were trained men they would be of inestimable value in shaping these collections of citizens into efficient armies.

Government aided schools are therefore required to give such a course in Military Tactics as will create in this country a body of men, whose knowledge of the Military Art is sufficient to enable them to officer companies of infantry when called upon by the Government in the defense of the country.

From the viewpoint of the student, the military training makes for character—"it systematically develops the body and it educates the mind along a consistent line for the double purpose of clear thinking and effective practical work."

"It exercises the character, it disciplines the mind, it inculcates habits of subordination to lawful authority, of strict personal accountability for word and act, of truth telling, of integrity and fidelity to trust, of simplicity of life and of courage."

In addition, a cadet has during his term as such, most excellent opportunities to perfect himself in the great art of commanding others.

This problem is for every cadet to solve some time during his cadet career. He finds that he must know his men, and that he must know how to appeal to those under him, if he wishes to get results without antagonizing them.

How often capable men fail, simply because they have not the knack of exercising authority so as to obtain the most satisfactory results.

Often do graduates, even those to whom the military training was distasteful, express their appreciation of the value that this training which they received at College, is to them in their several walks of life.

INSPECTION.

The War Department designates an officer of the General Staff of the Regular Army to make an annual inspection of the Military Department of each of the institutions of learning in the United States at which an officer is regularly detailed. There are about one hundred such institutions. This inspector rates these schools according to their status and military efficiency.

ORGANIZATION.

The Corps of Cadets is organized as a battalion of three companies, staff and band, the drill and administration of which conform as far as possible to that of the Regular Army.

All students, other than those physically disabled, and those specially excused by the President of the College, are required to drill, and upon entering are enrolled in one of the companies of the battalion.

INSTRUCTION.

The instruction in the Military Department is both practical and theoretical. The practical instruction includes the School of the Soldier, Squad, Company and Battalion in Close and Extended Order, Ceremonies of Guard-Mounting, Review and Inspection, Dress Parade, Escort to the Color, Advance and Rear Guard work,

Patrolling and Scouting, Marches, Target Practice, Visual Signalling, Military Engineering and Topography.

The theoretical instruction is given to all members of the Senior Class and consists of instruction in Infantry Drill Regulations, Manual of Guard Duty, Firing Regulations for Small Arms, Field Service Regulations, First Aid to the Injured, etc., supplemented by lectures on tactical subjects, Army Regulations, Company Books and Papers, Messing, Cooking, Tactics, Camp Sanitation and Military Law.

EQUIPMENT.

The battalion of cadets is equipped with the United States magazine rifle, caliber 30, known as the Krag-Jorgensen, with complete equipment of side arms, cartridge box, etc. The cadet officers and non-commissioned staff officers are equipped with the regulation West Point cadet sword and sash.

The Government also has supplied the battalion with the new regulation sub-calibre target rifle for gallery practice, and has been very liberal in the allowance of ammunition for gallery practice, of blank cartridges for field exercises, and of ball cartridges for outdoor range practice.

Students are held strictly accountable for all arms and equipment issued to them.

PROMOTIONS.

The officers and non-commissioned officers of the corps are selected with reference primarily to their fitness for the duties they will be required to perform. Their general deportment and proficiency in academic work are also given weight in making such selection.

Commissioned officers are, as a rule, selected from the Senior Class, sergeants from the Junior Class, and corporals from the Sophomore Class.

Cadet officers are required to serve from the beginning of the scholastic year up to March 1, of that year. On this date readjustment of rank is made, based upon the following: Military Effi-

ciency, as evidenced by the fall drills and winter recitations in the Tactical Department; Military Discipline and Soldierly Bearing; General Deportment.

UNIFORM.

The uniform worn by all members of the battalion of cadets is the regulation West Point fatigue uniform, and is made of the best Charlottesville gray cloth. The uniform consists of the gray fatigue blouse, trousers and cap, with white cross belt and white waist belt for all military formations. By special contract with one of the largest Military Equipment houses in the United States, the uniform and equipment is furnished at a very low price. Measures for this uniform are taken as soon as the student arrives at College, and fit is guaranteed.

In summer, the field service uniform is worn, consisting of olive drab blouse, shirt, and trousers, with canvas leggins, regulation campaign hat, tan waist belt and black tie.

White gloves, collars, caps and other military accessories may be purchased at the stores near the College, or from the contractor who furnishes the uniforms.

Information concerning the cost of uniforms, etc., may be found on page 134.

PHYSICAL CULTURE.

DIRECTOR BYRD.

The physical culture of the students is provided for by a regular course of instruction in the Gymnasium. The course is carefully planned, so as to develop gradually and scientifically the physical powers of each student. One of the most valuable features of this Department is a complete anthropometry outfit, by means of which measurements and strength tests of students are taken at the beginning and also at the end of each scholastic year. By means of these measurements and tests the exact physical con-

dition of each individual student can be ascertained, and such special exercises given as will produce a symmetrical development of the body. While desiring to make the work in the Gymnasium of practical value to all the students, the required work only extends through the Preparatory and Sub-Freshman Years.

COURSES OFFERED.

*460. GYMNASIUM WORK. Scientific body building, with light gymnastics.

Preparatory Year—3 practical periods per week.

461. HYGIENE. The care of the person in its relation to physical well-being.

Sub-Freshman Year—Second Term, 2 practical periods per week.

*462. GYMNASIUM WORK. Scientific body building, with heavier gymnastic work.

Sub-Freshman Year—2 practical periods per week.

SUB-COLLEGIATE INSTRUCTION.

PROFESSOR HARRISON.
PROFESSOR RICHARDSON.

This Department was established in 1892, and reorganized in 1913; and is designed to meet the requirements of those students who have not had the advantage of a thorough grammar and high school training, with a view to equipping them to enter the regular collegiate department.

Only such students are desired as will be able to enter the Freshman Class within two years, and who are fifteen years of age. This course is recommended specially to students who have not been to school for several years; for their progress in the regular col-

*This work, temporarily discontinued on account of unusual conditions, will be resumed as soon as conditions permit.

legiate course, by virtue of such a drawback, would be seriously impeded. It is to be remarked that as a rule the students who have taken this course make excellent progress in their later college work. Students in this Department are subject to the same military regulations as other students.

For outline of courses see page 115.

VETERINARY SCIENCE.

PROFESSOR BUCKLEY.

This Department offers instruction in the elements of veterinary science. The course embraces the study of the external form as well as the internal structure and functions of the domesticated animals. It is intended to supplement animal husbandry instruction, and does not have for its object the training of students for veterinary practice. The preservation of health in animals is more aimed at than their restoration from disease. When studiously pursued the courses offered are of great value to the breeder, feeder or manager of live stock.

COURSES OFFERED.

The accompanying brief descriptions indicate the scope of the different courses.

480. SANITATION. Public discussion has emphasized a necessity for better practices in the production and care of animal products used for human food. The study of sanitation, therefore, is of considerable importance to students who may elect courses of study bearing upon animal production and dairying. Inasmuch as sanitary laws are applicable to the individual and the home, as well as to animals and their stables, it is desirable that all students receive some instruction in this subject. It is given, therefore, early in the course before specialization of subjects is made.

Sub-Freshman Year—Second Term, 2 practical periods per week.

481. ANATOMY AND PHYSIOLOGY. This course embraces a general consideration of the structure and functions of the animal body, with especial reference to animal production and dairying.

Junior Year—Second Term, 3 theoretical periods per week.

482. ANIMAL DISEASES. A study is made of the diseases of the domesticated animals with emphasis upon sanitation, practical bacteriology, nursing, administration of medicine and use of common medicinal substances. The aim of this course is to enable the student to perceive the early appearance of diseases and intelligently care for them under proper veterinary supervision.

Senior Year—Second Term, 5 theoretical and 6 practical periods per week.

483. ANIMAL DISEASES. A briefer course in animal diseases is offered to the students in the two-year Agricultural and Horticultural Courses.

Second Year—Second Term, 2 theoretical and 4 practical periods per week.

THE COLLEGE LIBRARY.

DR. SILVESTER.

The College Library may be properly regarded as one of the departments of the institution, as its aid for purposes of reference and its influence upon the mental development of the students must always be felt throughout all courses. The present quarters of the Library, while adequate for its immediate needs, will necessarily be too limited in the course of time. The reading room is well arranged and lighted, and is in all respects comfortable and convenient.

While the Library is not large, the collection of works has been carefully chosen, and the shelves contain a fair supply of works of reference, history, biography, essays, poetry and the standard works of fiction. Several thousand volumes of bound United States Government Reports comprise an important addition to the reference works of the Library. Most of the leading magazines and a number of newspapers are subscribed for; technical periodicals and works of reference relating to specific branches are deposited in the libraries of the various departments.

The works in the Library are classified according to the modern Dewey Decimal System of classification. As rapidly as possible the sets of Government Reports that are most valuable are being completed and catalogued. At present there are on hand completed to date, or nearing completion, sets of the reports and bulletins of the United States Agricultural Department, the Geological Survey, the Fish Commission, the Smithsonian Institution, the National Museum, the Bureau of Ethnology, the Bureau of Education, the Labor Bureau, the Census Bureau and the Bureau of American Republics. There are also nearly completed sets of the Consular Reports, Special Consular Reports, the Engineers' Reports of the United States Army, the War of the Rebellion Records and Messages and Documents, besides many other miscellaneous publications of great value. Many valuable State publications are also on file.

It is the aim of the Librarian to render all these valuable works available for easy reference by the students.

Grateful acknowledgment is made to the officers of all the departments and bureaus above noted for their publications, and especially to the United States Superintendent of Documents, through whose aid many public documents have been received. Thanks are likewise due the following for valuable additions to the Library: Johns Hopkins University, the Geological Survey, the Weather Service, the Highway Commission, and the Bureau of Statistics and Information. Special thanks are due the county press for their liberality in sending their publications free to the Library.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

MR. DARROW.

Aims.

Service, first, last and all the time is the aim of the Y. M. C. A. It attempts nothing through selfish motives, but through the desire to turn into right channels a boy's surplus energy.

Nature.

The Maryland Agricultural College Association is affiliated with the International Y. M. C. A. and membership in the local branch carries with it a welcome to all city and student associations, and during vacation periods, entitles the holder to many of the privileges of the city Y. M. C. A.

Officers.

For the first time a salaried secretary is in charge of the Y. M. C. A. organization. He works through and with a student cabinet, having a President, Vice-President, Recorder, Treasurer, and chairmen of the following committees: Employment, Membership, Social Affairs, Music, Publications and Bible Study.

The Employment Committee assists students in finding the kind of work they want, acting as a clearing house to employer and employee.

The Membership Chairman's duties are as the title indicates. The Social Chairman plans receptions, banquets, and social affairs affording a pleasant evening's entertainment to all. The Music Chairman obtains special music for Sunday and other meetings, and the Publications Chairman keeps the public informed.

Regular Meetings.

The Bible Study Chairman organizes bible and special problem study classes, and endeavors to interest the student in unselfish ideals.

Special speakers on both popular and religious subjects, are provided for Sunday 3:30 meetings. The proximity to Washington makes it possible to obtain the best of talent, Representatives, Government officials, worth while business men, and Ministers of power, thus making the meetings of great value.

Location.

The Y. M. C. A. will move into Calvert Hall when completed. There it will have beautiful quarters; a game room, furnished with

all kinds of games, a pool room, a reading and writing room, and an office for the Secretary. A good readable line of books having a sane, helpful, moral tone will make the reading room attractive.

New Students.

Receptions are given to get the new men acquainted with the student body and with the members of the faculty, so as to make them feel "at home."

New students are given special attention, warned of dangers and guided to harmless but interesting methods of "letting off steam" without scorching their moral fibre.

A handbook is published, giving the student detailed information about the College, its societies and activities. Upon request it will be mailed to you free of charge.

The Association welcomes at all times suggestions for its betterment and extension of its service.

COURSES OF STUDY.

In order to systematize the work of the different departments of the College, and as far as possible arrange for specialization within limits consistent with the normal development of individual students, eleven distinct courses of study have been prepared, one of which the student is expected to choose upon entering the regular College work.

These courses are Agricultural Education, Agronomy, Animal Husbandry, Horticulture, Biology, Chemistry, Canning, General Science, Civil Engineering, Electrical Engineering and Mechanical Engineering.

A continuous and progressive course of work, beginning in the Freshman Year, with a nearly uniform course for all students, and gradually separating in the three succeeding years until the class work is almost wholly specialized, has been found to be most satisfactory. A broad and liberal foundation in English, mathematics and history is laid in the Freshman and Sophomore Years, and then the particular line of study desired is emphasized more and more until the end of the course.

In addition to the regular collegiate courses, two-year courses are given in Agriculture and Horticulture.

There are also two Courses in Sub-collegiate Instruction for the benefit of students unable to obtain elsewhere adequate preparation for entrance into the Freshman Class.

Short Winter Courses in Agriculture and Horticulture are given for the benefit of those who find it impossible to afford the time necessary for an extended course in these subjects.

The Agricultural College, in co-operation with the State Department of Education, conducts a six-weeks' SUMMER SCHOOL, beginning this year on June 22nd.

The purpose of the SUMMER SCHOOL is to provide a course of vocational training for teachers and prospective teachers of rural and graded schools. The work offered this year includes courses in Elementary Agriculture, Domestic Science and Art, Industrial Hand Work, Theory and Practice of Teaching, History of Mary-

land, State and National Constitutions, Chemistry, Physics, Botany, Zoology and Entomology.

A bulletin giving a full description of the courses is issued by the College. For full information address the Director of the Summer School.

In the tabular statements of the courses the periods per week are given, the numbers in parenthesis denoting practical or laboratory periods, the others theoretical or recitation periods.

AGRICULTURAL EDUCATION COURSE.

The Course in Agricultural Education is arranged to give the student a broad general knowledge of agriculture, languages, science and pedagogy.

Students taking this course receive practically the same work during the first two years as those of the other agricultural courses. In the Junior and Senior Years the agricultural work is continued in addition to the special work in pedagogy and practice teaching, which these students receive. Enough of agriculture is included in the course to enable the student to carry on farm operations in a scientific manner. The graduate is fitted not only to teach and supervise the teaching of agricultural subjects, but to manage school demonstration farms or conduct a farm of his own.

AGRONOMY COURSE.

The four-year Course in Agronomy is designed to fit the graduate for conducting practical operations on the farm, or, should taste or circumstances so direct, to prosecute successfully advanced scientific research along the lines of agronomy, or if occasion requires, to act as county demonstrators or advisers. With these ends in view, the Course has been made at once comprehensive and tech-

nical. It is comprehensive enough to include whatever is necessary for the complete development of the work, yet technical enough to make the student feel that he is a specialist and equipped for special work.

ANIMAL HUSBANDRY COURSE.

The purpose of the Course in Animal Husbandry is to fit the graduate to carry out successfully the operations pertaining to general farming, to become an expert in the raising and feeding of live

stock, to pursue scientific investigations along lines pertaining to animal husbandry, or to act in the capacity of an advisor or demonstrator in rural communities. Therefore, the curriculum has been

outlined to include, in addition to the subjects necessary for the development of a specialist in animal husbandry, those which will give a broad training in agriculture and other cultural branches.

TWO-YEAR AGRICULTURAL COURSE.

A large number of young men seeking to better themselves in their chosen profession of farming are calling for instruction in those courses pertaining to practical agriculture. Many of them have neither the time nor means at hand to take the full four-year Course, but while away in school they wish to gain the greatest possible amount of instruction and assistance which is particularly applicable to the farm. They realize that the farm can no longer be run in the old-time haphazard way, that there is a demand for skill and the highest order of intelligence to make a success on the farm, as in any other line of human endeavor, and that brains must be

planted with each little seed, and also put into the feeding trough for the animal. To meet the demand for instruction along these lines, and for a better understanding of the underlying principles of successful agriculture, a short course of two years has been provided.

It embraces much of the technical work of the four-year Course, and is especially designed to lay a foundation that will secure success in practical farming, which, as it must be conducted today, is a

union of many interests. To enter this Course a working knowledge of arithmetic, including fractions, mensuration and percentage, and a common-school training in English is required. Upon completion of this Course a certificate is granted.

SHORT WINTER COURSES.

For men and women who can spare from one to ten weeks only from their home duties the College offers a series of short courses occupying from one to two weeks each, beginning after the Christmas vacation.

For 1915 the arrangement will be:

First week—Soils and Fertilizers.

Second week—{ Farm Crops. / Domestic Science.

Third week—Poultry Husbandry.

Fourth and fifth weeks—Horticulture.

Sixth week—Horses and Beef Cattle.

Seventh week—Swine and Sheep Husbandry.

Eighth week—Dairy Husbandry.

Ninth week—Farm Implements and Motors.

Tenth week—Farm Carpentry, Blacksmithing and Pipe Fitting.

Experience has demonstrated the advantage of dividing the work into short periods, during which time the attention of the student is engrossed wholly with one subject. It enables the student to concentrate his efforts and affords opportunity for those who are interested in but one or two subjects, such as poultry husbandry or domestic science, for example, to take what they desire with the greatest economy of time.

No charge is made to short course students for the use of laboratories. Good board at moderate rates can be secured in the neighborhood. For more detailed information regarding these courses, write for bulletin and folders.

HORTICULTURAL COURSE.

Through the organization of the School of Horticulture an opportunity is presented for students in the four-year Course to spe-

§For students specializing in Landscape Gardening and Floriculture.

cialize in either pomology, vegetable culture or landscape gardening and floriculture.

These courses are designed to fit the student for conducting practical operations in horticulture on the farm, or to continue scientific research work and teaching in his chosen field. Practical work is made a prominent feature of the course. In the Freshman and Sophomore Years the work is not materially different from that of the Agricultural and Biological Courses, as all students are required to take certain fundamental subjects. In the Junior and Senior Years the courses become specialized.

The College and Experiment Station farm, orchards, greenhouses, etc., together with the close proximity of the Institution to the United States Department of Agriculture greenhouses and experiment farms, offer unusual opportunities to the students in horticulture.

TWO-YEAR HORTICULTURAL COURSE.

The two-year Course in Horticulture is intended for young men who wish to devote their efforts to fruit and vegetable growing, or

to commercial nursery or flower business, and who cannot afford the time required for a regular College course.

The Course is so arranged that the students will be given the fundamental work in horticulture and agriculture, and they can also specialize in their second year to some extent along the line of horticulture in which they are particularly interested. Courses in English, botany, entomology and chemistry are included in their work.

Upon the completion of the two years' work satisfactorily, the students are given a Certificate.

SHORT WINTER COURSE IN HORTICULTURE.

A two weeks' short Course in Horticulture is offered each winter to those who are unable to spend a longer time at the College. The Course is designed for practical men who can leave home for short periods during the winter. It consists of lectures on all phases of horticulture and practical demonstrations in spraying, packing, pruning, etc. For further particulars regarding Winter Courses, see page 96, special folders, etc.

BIOLOGICAL COURSE.

The Biological Course, while offering a general education and special training in the natural sciences, is outlined in particular for those who wish to specialize in some branch of botany or zoology. It aims to fit men for practical work in the field of plant pathology and entomology, but will also give training for special work in the pure sciences.

In addition, this Course is specially valuable in preparing students who wish to enter the medical profession, particularly those who expect to enter the highest grade medical schools, which require for entrance a four year collegiate course in sciences and languages. These students will be required to substitute organic chemistry for some subject given in the regular Biological Course.

There are many opportunities for scientific workers in connection with the Agricultural investigations of the Federal Government and of the State Experiment Stations, as well as in the State inspection

work, for which this Course gives training. In fact, it is now difficult to secure men trained for such work. Full opportunity is given for the student to develop his natural resources and to learn to do

work on his own responsibility. A large part of his time is spent in both practical and theoretical biological studies, without neglect-

ing the cultural studies which are a necessary foundation for every specialist.

CHEMICAL COURSE.

The Course in Chemistry is essentially the same as the other science courses until the second term of the Sophomore Year, though any of the four-year courses would prepare for this, as the amount of chemistry is the same in all courses to the beginning of the Second

Chemical Course.

*Courses marked with asterisks are alternative.

Term of the Sophomore Year, and the demands on the agricultural or technical chemist are now so varied that a foundation with more of the essentials of the agricultural or the engineering courses is often desirable.

Beginning with the Second Term of the Sophomore Year the major part of the student's time is devoted to chemistry, the practical work in the laboratory occupying approximately half of his time. The Course is essentially a course in agricultural chemistry, fitting the graduate for positions in agricultural colleges, experiment stations and the United States Department of Agriculture.

CANNING COURSE.

The great importance of the canning industry in Maryland; the fact that it is, to a great extent, an agricultural industry, and the further fact that the suggestion of a Course has met with so many hearty indorsements from prominent canners, has caused the College

authorities to establish a Course in Canning, in order that young men interested may have an opportunity to become acquainted with the underlying sciences, and at the same time secure a liberal education.

During the first two years of the Course the studies will not differ much from those of the other courses. After this a large part of the student's time will be occupied with sciences relating directly to the canning industry, such as bacteriology, chemistry, agriculture, horticulture, and canning technology. This latter will cover a wide range and will include the theory and practice of canning in various lines, experimental work, and lectures from persons of national reputation. Assistance in these lectures has been promised by officers of the National Canners' Association and others.

A canning expert is to be engaged to take charge of the technical instruction in canning, which will include both theoretical and laboratory work.

Routine and factory experience are expected to be gained by students spending at least two summers, usually devoted to vacation, in a canning factory.

GENERAL SCIENCE COURSE.

The General Science Course is offered to those young men who have not chosen as their vocation in life any of the technical professions, but who are seeking for such general culture as will fit them to become, after graduation, useful members of society. Young men desiring to study law, or medicine, or the liberal arts, or to become teachers, will find in the curriculum of this Course a highly satisfactory preparation for such work. While emphasis has been placed upon subjects, such as English, language, literature, history, mathematics, etc., the natural sciences occupy a prominent place in the Course and the range of electives beginning in the Junior Year will enable each to choose for himself, under certain necessary regulations, such a group of studies as will be best adapted to his own peculiar requirements.

experience thus afforded; or which will entitle him to advanced standing, if he desires to pursue a more extended course at a technical school of a higher grade. The curriculum, as outlined, includes not only studies having cultural value, but the sciences which form the basis of engineering. Students who have found themselves de-

ficient in ability to learn mathematics are not advised to enter an engineering course.

A thesis dealing with some problem in engineering will be required of all applicants for the degree of Bachelor of Science in Civil Engineering.

All engineering students in the Junior and Senior Classes are required to spend a portion of their time in the reading of the current engineering magazines.

ELECTRICAL ENGINEERING COURSE.

This Course was introduced because of the great demand for young men who are not only well trained in the practical construc-

tion and operation of electrical machines, but who have a thorough knowledge of the principles and laws controlling the phenomena and forces with which they have to deal.

The general plan of the Course is to make the student thoroughly acquainted with the scientific laws which are the basis of the profession, and at the same time to train him to adapt the laws to practice, to use his own judgment, and to apply honest and accurate methods in all his work.

The curriculum, as outlined, includes those studies which provide a broad general culture, as well as a good foundation for the engineering work which follows. From the beginning of the Second Term of the Sophomore Year the electrical training extends continuously throughout the Course.

MECHANICAL ENGINEERING COURSE.

The curriculum of the several years of this Course is outlined so as to give general culture as well as a proper foundation for the profession of Mechanical Engineer.

Young men not having a natural taste for mathematics and the handling of tools are advised not to pursue this Course. The practical work of this Course is most thorough. The student is familiarized from the first with the reading of engineering drawings and with the use of tools and implements used in wood and iron work. He is given daily practice in the shops and is encouraged to develop whatever inventive talent he may have. Results have shown that students completing this Course have no difficulty in securing employment immediately upon graduation in the field of mechanics or mechanical engineering.

Mechanical Engineering Course.

Subject.	Term. I	Term. II	Term. III
Freshman Year.			
Mathematics 404	(2)	.....	.....

SYNOPSIS OF COURSES.

The figures represent the number of periods per week, those in parenthesis indicating practical or laboratory periods; the others, theoretical or recitation periods.

Four Year Courses—1914-15.

Term and Subject.	Agriculture			Horticulture	Biology	Chemistry	Canning	General Science	Engineering		
	Agricultural Education	Agronomy	Animal Husbandry						Civil	Electrical	Mechanical

GENERAL INFORMATION.

REQUIREMENTS FOR ADMISSION TO THE COLLEGE.

A candidate for admission to the College must present, together with his Scholastic Record, a certificate of good moral character; and if the candidate be from another school or college, the certificate must show that he left such institution in good standing.

METHOD OF ADMISSION.

There are two methods of gaining admission to the Freshman Class:

(1.) *By Certificate.*—The College will accept certificates from approved high schools of Maryland and the District of Columbia, and from accredited academies and preparatory schools of this State and of other States.

The certificates presented by the candidate must be officially certified by the principal of the school attended. It must state in detail the work completed by the candidate and, if the candidate be from a Maryland high school, the certificate should state that the candidate has completed, at least, the tenth year of the course of study as outlined for Maryland schools by the State Board of Education.

All admissions by certificate are regarded as merely provisional. That is, while a student presenting a proper certificate is admitted to such standing as it shows him entitled to, he may be required to take a special examination or to do special work in any subject in which his preparation proves to be unsatisfactory; or if, after a fair trial, he fails to maintain a standing in the class to which he was admitted, he may be dropped to a lower class.

Blank certificates conveniently arranged for the desired data, will be sent upon application.

(2.) *By Examination.*—Candidates not admitted by certificate will be required to stand written examinations upon the entrance subjects. These examinations will be held for 1914 on June 10th and 11th, and September 15th and 16th.

Requirements for admission to the Freshman Class for the session of 1914-15 will be as follows:

Number of Units Required.—For the present, thirteen (13) units are required for entrance. This is equivalent to the completion of, at least, the tenth grade of the course of study as outlined for Maryland schools by the State Board of Education. A unit designates not less than four or five "periods" of classroom work or eight or ten "periods" of laboratory work per week, continued throughout the school year, each "period" being not less than forty minutes.

DISTRIBUTION OF THE REQUIRED UNITS.

Of the thirteen (13) units required for admission to the Freshman Class, eleven and one-half (11½) are specified as follows:

Group I	English	3	units	5½ required
	Mathematics: Algebra	1½	"	
	Mathematics: Plane Geometry	1	"	
Group II	American History and Civics	1	"	2 required
	English History	1	"	
	Ancient History	1	"	
	General History	1	"	
Group III	Latin	1 or 2	"	2 required
	German	1 or 2	"	
	French	1 or 2	"	
Group IV	Physics	1	"	2 required
	Chemistry	1	"	
	Botany	½	"	
	Physical Geography	½	"	
	Zoology	½	"	
	Physiology	½	"	
Group V	Shop Work	½	"	0 required
	Drawing	½	"	
	Special Agricultural Subjects	½	"	

The additional one and one-half (1½) units may be offered from Groups II, III, IV or V.

Deficiencies.—A deficiency of two units will be allowed a candidate as conditions, but such conditions must be removed by the end of the Scholastic Year in which the candidate is admitted.

SUGGESTIONS FOR PREPARATION IN THE REQUIRED SUBJECTS GROUP I.

ENGLISH.—Preparation in English has two main objects: (1), command of correct and clear English, spoken and written; (2), power to read with intelligence and appreciation.

To secure the first end, training in grammar and the simple principles of rhetoric and the writing of frequent compositions are essential. The candidate must be able to spell, capitalize and punctuate correctly. He must show a practical knowledge of the essentials of English grammar, including ordinary grammatical terminology, inflection, syntax, the use of phrases and clauses; a thorough training in the construction of the sentence; and familiarity with the simpler principles of paragraph division and structure.

To secure the second end the candidate is required to read the works named below under A and B. The list is intended to give the candidate the opportunity of reading, under intelligent direction, a number of important pieces of literature.

ENGLISH A. For reading and practice. (One and one-half units.) The candidate should read the works prescribed below with a view to understanding and enjoying them. He will be expected to show a reasonable degree of familiarity with their substance. The form of examination will usually be the writing of a paragraph or two on each of several topics, to be chosen by the candidate from a considerable number set before him in the examination paper.

FOR STUDENTS ENTERING IN 1914:

Shakespeare's "As You Like It" and "Julius Caesar"; Addison's "Sir Roger de Coverley Papers"; Scott's "Ivanhoe"; Goldsmith's "Vicar of Wakefield"; Irving's "Sketch Book"; Macaulay's "Lays of Ancient Rome"; Longfellow's "Evangeline"; Lowell's "Vision of Sir Launfal"; Poe's "Raven"; Eliot's "Silas Marner"; Gray's "Elegy Written in a Country Churchyard."

ENGLISH B. For study and practice. (One and one-half units.) The candidate should read the books presented below with

the view of acquiring such knowledge of their contents as will enable him to answer specific questions with accuracy and some detail. The examination is not designed, however, to require minute drill in difficulties of verbal expression, unimportant allusions and technical details.

FOR STUDENTS ENTERING IN 1914:

Shakespeare's "Macbeth"; Milton's "L'Allegro," "Il Penseroso," and "Comus"; Macaulay's Essay on Johnson or Carlyle's Essay on Burns; Washington's Farewell Address and Webster's First Bunker Hill Oration or Burke's Speech of Conciliation with America.

ALGEBRA TO QUADRATICS. (One unit.) As treated in the algebras of Wells, Wentworth, Tanner, Fine, or an equivalent. The four fundamental operations; factoring; highest common factor and least common multiple; fractions (including their conception as ratios) and complex fractions; powers and roots; the solution of linear equations, both numerical and literal, and of problems depending on linear equations; radicals and the theory of exponents; and the solution of simple second degree equations in one unknown quantity by factoring.

ALGEBRA FROM QUADRATICS. (One-half unit.) As treated in the algebras of Wells, Wentworth, Tanner, Fine, or an equivalent. Equations with one or more unknown quantities, to be solved by the methods of linear or quadratic equations; ratio, proportion and variation; variables and limits; properties of series, including the binomial theorem for positive integral exponents, and the formulas for the nth term and sum of the terms of arithmetical and geometrical progressions with applications; logarithms.

PLANE GEOMETRY. (One unit.) As treated by Wentworth, McMahon, Phillips and Fisher, or an equivalent. The usual theorems and constructions, including the general properties of plane rectilinear figures, the circle and measurement of angles, similar polygons, areas, regular polygons and the measurement of the circle; the solution of original exercises, including loci problems; and the application to the mensuration of lines and plane surfaces. The student should be able to prove every statement made, going back step by step until it rests upon primary definitions or axioms.

GROUP II.

AMERICAN HISTORY. (One unit.) Channing's Student's History of the United States, McLaughlin's History of the American Nation, Hart's Essentials in American History, or an equivalent. The discovery, exploration and settlement of America; the colonial policy of England, culminating in the Revolution; the political, economic and social history of the United States since the adoption of the Constitution.

ANCIENT HISTORY TO 300 A. D. (One unit.) If a single text book is used, it should be West's Ancient World, Wolfson's Essentials in Ancient History, Morey's Outlines of Ancient History, or an equivalent.

ENGLISH HISTORY. (One unit.) Cheyney's A Short History of England, Andrew's History of England, Walker's Essentials in English History, Montgomery's English History, or an equivalent.

GENERAL HISTORY. (One unit.) Myer's, Fischer's or Colby's General History, or an equivalent.

The entrance examinations in History will be so framed as to require comparison and the use of the judgment, rather than the mere use of the memory.

GROUP III.

ELEMENTARY FRENCH. First Year. (One unit.) Aldrich and Foster's Foundations of French and French Reader, or their equivalents.

Second Year. (One unit.) Reading of four to five hundred pages of graduated texts.

ELEMENTARY GERMAN. First Year. (One unit.) Bacon's German Grammar, or an equivalent.

Second Year. (One unit.) Reading of about 300 pages of graduated texts.

LATIN. First Year. (One unit.) First Latin Book completed.

Second Year. (One unit.) Three Books of Caesar, or an equivalent.

Forms and constructions needed in texts from Standard Latin Grammar. Prose based on texts.

GROUP IV.

PHYSICS. (One unit.) As much as is contained in the text-books of Carhart and Chute, Hall and Bergen, Gage's Elements of Physics, Avery's Elements of Natural Philosophy, or an equivalent.

BOTANY. (One unit.) As much as is contained in Gray's Lessons, Bailey's Elementary Botany, Bergen's Foundations, or an equivalent.

CHEMISTRY. (One unit.) Preparation should include the study of at least one standard text-book, to the end that the pupil may gain a comprehensive and connected view of the most important facts of elementary chemistry. The subjects should be attempted only in schools which possess an adequate equipment; laboratory work is essential and original notes must be submitted; more importance will attach to descriptive chemistry than to analytical, and the student should become as familiar as possible with the commonest non-metals and metals, as well as their simpler compounds.

PHYSICAL GEOGRAPHY. (One-half unit.) A study of the earth, atmosphere, waters and attendant phenomena; the distribution of both animal and vegetable life, and the various industries resulting from the development of the natural resources of the earth.

Text-books on Physical Geography by Gilbert, Davis, Fairbanks, Tarr, or an equivalent.

PHYSIOLOGY. (One-half unit.) The preparation should include the general facts of the anatomy, histology and physiology of the human body and the essentials of hygiene. A text-book, such as the first part of Hough and Sedgwick's The Human Mechanism, or an equivalent should be used in connection with charts and models.

ZOOLOGY. (One-half unit.) The preparation in Zoology should include a general knowledge of common animals of the locality with regard to their ecological relations; the general study of the animal forms such as the Amoeba, a ciliate, an earth worm, insect, frog and mammal. He should have some work in the general physiology of these types and a comparison of life processes in animals and plants. The student should have such general knowledge of the animal kingdom, the characteristics of the Phyla and principal classes of animals as is given in Davison's Practical Zoology.

GROUP V.

SHOPWORK. (One-half unit.) A candidate who offers shopwork as an entrance subject is asked to present a detailed statement from his instructor, setting forth the kind and amount of work done.

DRAWING. (One-half unit.) Candidate must present a detailed statement from his instructor showing the kind and amount of work done and submit drawings done by himself.

SPECIAL AGRICULTURAL SUBJECTS. (One-half unit.) This class includes nature studies and other allied subjects not specifically designated in Group IV.

FOR ADVANCED STANDING. Applicants for advanced standing in any course, in addition to satisfying the requirements for admission to the Freshman Class, must pass an examination in the studies which have been pursued by the class for which they are candidates. Work done elsewhere is accepted when properly certified and found on examination to be equivalent in extent and quality to that required at this College.

EXAMINATIONS FOR ADMISSION TO ANY HIGHER CLASS will be held at the College in June and September at the same times as examinations for admission to the Freshman Class.

CANDIDATES FOR THE SUB-FRESHMAN CLASS will be required to present certificates or to pass examinations covering the work outlined for the Preparatory Class, or an equivalent.

FOR ENTRANCE TO THE PREPARATORY CLASS the requirements are: English grammar, arithmetic, United States history and geography.

Students from newly acquired territory or any foreign country must have a local guardian appointed with parental powers, with whom the President can deal in any case of emergency. Students who cannot speak English are not desired, and are advised that satisfactory progress at this College on their part cannot be achieved until they have familiarized themselves partly, at least, with the English language.

EXAMINATIONS AND PROMOTIONS.

In order to pass from one class to the next higher a student is required to pass an examination in each study pursued, by a mark of at least sixty per cent., and to have a combined mark in each branch (daily and examination) of at least seventy per cent.

A student will not be promoted if it is manifest that he cannot pursue successfully the advanced work.

REPORTS.

Detailed reports are sent to parents and guardians at the end of every quarter. These give the grade of the student in every branch of study, his attendance record and his conduct record with comment by the President upon each item.

In addition to this, monthly reports are issued for October, November, January, February and April. These give general information as to scholarship, conduct, attendance and health, and call attention to deficiency in any one of these particulars.

GRADUATION AND DEGREES.

Degrees are granted by the Board of Trustees upon the recommendation of the Faculty.

All applications for degrees must be approved by the Faculty.

BACHELOR OF SCIENCE.

As a requisite for graduation the candidate for this degree must have completed the work previously outlined, including a thesis.

The subject for this thesis must be approved prior to February 1st, by the head of the department in which the investigation is to be pursued, and the thesis must be submitted not later than May 15th.

MASTER OF SCIENCE.

The degree of Master of Science may be conferred as follows:

1. Upon persons who have taken the degree of Bachelor of Science in a recognized institution, and have pursued successfully at this College for one year a course of graduate study, satisfying the following requirements:

The course shall consist of a major subject and two minor subjects germane to the major subject and shall be approved by the professor in charge of the major subject.

At least one minor subject shall be in a different department from the major subject.

The course shall occupy not less than fifteen credit periods per term.

Not fewer than five credit periods per term shall be devoted to the minor subjects.

A thesis satisfactory to the professor in charge of the major subject shall be presented.

2. Upon college graduates of not less than two years' standing, who are employed in any of the departments of the College, including the Experiment Station, and who have completed the equivalent of the above course of study. Candidates under this clause must have their applications approved at least eighteen months before they contemplate receiving their degree.

3. Upon graduates of this College of not less than three years' standing, who having been connected with institutions of learning or research, where adequate facilities for advanced work are available, have completed a course equivalent to (1) and have presented a satisfactory thesis.

MECHANICAL ENGINEER.

The degree of Mechanical Engineer (M. E.) may be conferred as follows:

1. Upon graduates of this College of not less than three years' standing, who having been connected with institutions of learning or research, where adequate facilities for advanced work are available, have completed a course consisting of a major and two minor

subjects, and presented a satisfactory thesis. The course of study shall be outlined by the heads of the Departments of Civil, Electrical and Mechanical Engineering.

2. Upon graduates of this College who have had three years' professional experience of an acceptable character. Such candidates must present a full report of such experience and such other information as to the qualifications for the degree as may be found desirable, and in addition shall present a satisfactory thesis.

3. All candidates must be at least Junior members of the American Society of Mechanical Engineers. All applications for degrees must be approved twelve months prior to the date they contemplate receiving the degree, and the thesis must be presented at least one month prior to such date.

CIVIL ENGINEER.

The degree of Civil Engineer may be conferred upon any candidate who is a graduate of this College with the degree of Bachelor of Science in Civil Engineering, and has been engaged in engineering pursuits for not less than three years since graduation, provided:

1. That he shall be at least a Junior member of the American Society of Civil Engineers.

2. That he shall accompany his application with a synopsis of the work upon which he bases his request.

3. That the Committee composed of the heads of the Civil, Electrical and Mechanical Engineering Departments, to whom his application shall be referred, shall consider him eligible.

4. That previous to receiving the degree he shall comply with such further conditions as the aforesaid committee shall impose.

SCHOLARSHIPS.

High-School Scholarships.—To encourage *worthy young men* who desire a Collegiate Education, the Board of Trustees has established for each High School in Maryland and the District of Colum-

bia, one scholarship *each year,** to be awarded under the following conditions:

1.—The person awarded a scholarship must be a graduate of a high school and qualified to enter the Freshman Class (See Entrance Requirements, page 117), and must be of approved moral character and at least 15 years of age.

2.—The appointment to a scholarship shall be made by the School Superintendent, upon the recommendation and certification of the Principal of the High School.

The Principal of the High School may recommend one or more persons for appointment, with information as to the merits of each case. In making appointments, not only class standing, but inability to meet the financial expenses of an education should be given consideration.

3.—The appointment shall be made for the term normally required to complete the course selected.

4.—Each scholarship has the value of $50.00 per year. This amount will be credited on the holder's account.

5.—The scholarship will be forfeited by persistent indifference to scholastic work or by repeated disregard of the rules of discipline of the College.

6.—The scholarship will be forfeited in case the holder fails of promotion at the end of any scholastic year, unless there are extenuating circumstances.

County Scholarships.—Counties which do not have a high school will be given one $50.00 scholarship each year, and the recipient may enter the Sub-Freshman class (See Entrance Requirements, page 123). The appointment to the scholarship is made by the County Superintendent after a competitive examination. In other respects the regulations governing this scholarship are the same as for the high-school scholarships.

Industrial Scholarships. For the encouragement of *worthy young men* of limited means towards getting a College education, a limited number of industrial scholarships have been established by the Board of Trustees to be awarded under the following conditions:

*This plan will be gradually put into effect as the present scholarships become vacant.

1.—The number of scholarships will depend upon the amount of service required.

2.—The value of the scholarship will be graduated according to the amount and character of the work performed, and will range from $40.00 per year upwards. The amount earned will be credited on the holder's account.

3.—The holder of such a scholarship will be required to render to the College certain specified services, such as work in the dining-room, on the corridors, in the library, etc.

4.—Such services will not as a rule prevent the holder from participating in military drill.

5.—Vacancies as they occur shall be filled by the President of the College and ratified by the Executive Committee of the Board of Trustees.

6.—The holder of an industrial scholarship: (a)—must be more than 15 years of age and of normal size, health and strength; (b)—must be of approved moral character as attested by some well-known resident of his locality; (c)—must be qualified to enter the Freshman Class of the College (See Entrance Requirements, page 117).

7.—The appointment shall be made for a term of four years.

8.—The scholarship will be forfeited by persistent indifference to scholastic work or by repeated disregard of the rules of discipline of the College.

9.—The scholarship will be forfeited in case the holder fails of promotion at the end of any scholastic year, unless there are extenuating circumstances.

10.—The scholarship will be forfeited in case the services required of the holder are not satisfactory to those in charge of the work.

FACILITIES FOR RELIGIOUS WORSHIP.

The College is undenominational in character. The daily exercises of the College include religious worship in the College Chapel. Students are encouraged to attend the church of their choice on

Sunday mornings. There is an Episcopal church at College Park; and at Berwyn, one mile north, and at Riverdale, one mile south, are Presbyterian churches. In Hyattsville, two miles south, may be found Catholic, Episcopal, Presbyterian, Baptist and Methodist churches. In the city of Washington are churches of all denominations, and students may attend service in this city on Sunday mornings. Parents are urged to insist upon their sons attending the church of the faith of their parents.

COLLEGE REGULATIONS.

The attention of parents is earnestly called to the following rules in force at this College: The College authorities can succeed in conferring the maximum amount of training upon the student only with and by the active support and earnest co-operation of the parent. The President of the College is always ready and willing to discuss with parent or guardian any failures in a student's record, and correspondence on this subject is always appreciated.

No student will be accepted as a matriculate until the contract card containing the following agreement for matriculation is signed by parent or guardian, and received by the President of the College.

It is understood that the President of the College as the executive of the same, and acting for the Board of Trustees, a party to this contract, *has the right to ask the withdrawal of a student at any time, when in his judgment such withdrawal may be necessary either for the interest of the young man or the institution which he attends. It is further understood that a parent or guardian can at any time withdraw his son or ward, subject to regulations herein set forth.*

A student manifesting indifference to the observance of the rules and regulations of the institution, or wanting in proper attention to the preparation of his work, will be cautioned to improve. Failing to do so his parents, upon notice given by the President, must withdraw their son.

A special pledge to refrain from what is popularly known as *"hazing,"* and taking unfair means in examinations is required of every applicant for entrance, before he will be allowed to matriculate. Parents should impress upon their sons that failure to live up to this pledge is a dishonor which unfits them to be longer students of the College. *"Hazing" is invariably punished by instant dismissal.*

Frequent absences from the College are invariably of great disadvantage to the student, in breaking in upon the continuity of his work and in distracting his mind from the main purpose of his attendance at the institution. Parents are therefore earnestly asked to refrain from granting frequent requests to leave the College.

Students will not be permitted to leave classes to answer telephone calls, unless they are urgent.

Students will not be permitted to make contracts or to sell any article to their associates without the approval of the President.

The College will not be responsible for articles left in the dormitories during vacation, nor for valuables left by students in their rooms at any time. They should be deposited with the College Treasurer, who will place them in the College safe and give a receipt therefor.

RULES ON COLLEGIATE ROUTINE, ENDORSED BY THE FACULTY.

1. A student may not change his course of study unless at the written request of his parent or guardian, and after said request has been endorsed by the head of the course abandoned, and the head of the course requested, and approved by the Committee on Courses.

2. Examinations to make up conditions acquired in any term will be given only on the mornings and afternoons of certain Saturdays in the following term set apart for this purpose, and at such dates as shall be provided for entrance examinations at the beginning of the scholastic year. On these dates students having conditions will be expected to take the examinations as scheduled and will be permitted to do so without the payment of a fee. Should, for any reason, an examination be requested at any other time, a charge of $1.00 will be made for each subject on which the applicant is examined, provided that all such special examinations shall be authorized by the faculty.

3. To attain proficiency a student must make an examination grade of 60 per cent.; also a term average of 70 per cent. In case of failure, upon re-examination a grade of 70 per cent. is required.

4. A credit period is one theoretical or two practical periods per week for one term.

5. A student may not be promoted if conditioned in more than one-fifth of the credit periods required for one year's work, provided that no student may be promoted with more than one condition in any one department.

6. A student may not be promoted if he has any conditions of more than a year outstanding.

7. Any student who uses unfair means in examination will: (1) receive no further examination in same subject; (2) receive zero for examination grade; (3) receive no commission; (4) receive no diploma.

8. A student is subject to an oral examination at any time within ten days after written examination.

9. An examination paper, containing erasures or showing alterations, may be rejected at the discretion of the Professor in charge, and a new examination ordered.

10. In computing term averages the daily grade is computed at 2, and the examination grade at 1.

11. The yearly averages in all studies is computed by giving each subject a weight according to the mean number of periods per week involved; theoretical periods being given a value of 2, practical periods 1.

12. Senior students must submit subjects for graduating theses prior to February 1st, and all theses for graduation must be completed prior to May 15th.

13. No special courses are permitted save by consent of the Committee on Courses. In case consent is granted for a special course, the certificate awarded attesting work will not have the College seal nor the Governor's signature.

14. No student may take work in more than one class during any one term.

EXPENSES.

FEES.—No tuition fee is required. The following are the only fixed charges payable by each student:

	Boarding Students.	Day Students.
Incidentals.—A part payment towards janitor service, heating and lighting recitation and public rooms, laboratories and library, medical attention, etc	$30.00	$30.00
Physical Culture, Gymnasium and Athletics	10.00	10.00
Book Rental	10.00	10.00
Room and furniture rent	35.00	....
Laundry	15.00	....
Board (in College dining hall), $4.00 per week or for College year, 36 weeks	140.00	....
	$240.00	$50.00
Uniforms: Winter	16.00	16.00
Uniforms: Summer	10.00	10.00
	$266.00	$76.00

Damage or Caution Money.—A deposit of $3.00 is required of all students at time of entrance as a guarantee against damage to property. Unused damage money is returned to the student at the end of the year.

Laboratory Fees.—A charge is made each student taking a laboratory course for outfit, material consumed and apparatus destroyed. The charge varies according to the subject.

A deposit in advance is required to meet the usual expenses. In case less is consumed the excess will be returned. In case more is consumed than covered by the deposit, the student will be required to pay the excess. The laboratory deposit shall be made previous to taking up work in the respective laboratories. The fees charged in the different laboratories are as follows:

		Per Term.
Chemistry:	Freshman and Sophomore	$3.00
	Junior and Senior	5.00
Physics		.75
Electrical Engineering:	Sophomore	.75
	Junior and Senior	1.00
Mechanical Engineering		1.00
Civil Engineering, Junior and Senior		1.00
Botany and Plant Physiology		2.50
Entomology and Zoology		3.00
Bacteriology		2.00
Veterinary		.50
Agronomy		2.00
Animal Husbandry		2.00
Horticulture		2.00

Students entering College after November 1st, or withdrawing prior to the close of the scholastic year, will be charged for the time they are in attendance, as follows:

Boarding students at the rate of $30.00 per month.

Day students at the rate of $6.00 per month.

Students withdrawing more than two weeks after entrance will be charged for at least one month's attendance.

Students withdrawing less than two weeks after entrance, will be charged at the rate of $2.00 per day.

Table board for students not rooming at the College will be $4.00 per week, or 25 cents per meal.

Day students may get lunch at noon at the lunch counter at nominal prices.

Charges against students are continued until formal withdrawal has been made.

No student will be promoted to another class, and no diploma will be conferred upon, nor any certificate issued to a student who is in arrears in his account with the College.

Students failing to pay the quarterly charges within 30 days from time due, will be required to withdraw until settlement is made, and a charge of 2 per cent. per month penalty will be made.

TIME OF PAYMENT.—For boarding students, $60.00 on entrance, $60.00 November 15th, $60.00 February 1st, $60.00 April 1st.

For day students, $12.50 on entrance, $12.50 November 15th, $12.50 February 1st, $12.50 April 1st.

Students will be required to pay a fee of 25 cents per piece for transportation of baggage to and from station.

In cases of illness, requiring a special nurse and medical attention, the expense must be borne by the student.

Students will be admitted free of cost to membership in College Athletic Association.

All College property in the possession of the individual student, such as his room, furniture, books, apparatus and military equipment, will be charged against him, and the parent or guardian must assume responsibility for its return without abuse to the proper department at the end of each scholastic year, at which time the account will be cancelled. If abused, the cost of replacing or repairing the abused article must be paid by the parent or guardian.

Damage to College property in public places in the building and on the grounds by the student will be charged to the whole student body, pro rata, unless the offender is known. In such cases, the whole expense of repairing or replacing the damaged property will be charged to the parent or guardian of the offending party. The matriculation of a student is evidence of the acceptance of this regulation.

UNIFORM.—The uniform is the same as worn at the United

States Military Academy at West Point. It is made of the best Charlottesville gray cloth, under a special contract with one of the best military equipment houses in the United States. This uniform is furnished at a very low price.

The uniform consists of gray fatigue blouse, gray fatigue trousers and gray fatigue cap, with white waist belt and white cross belt for all military formations. The uniform and equipment cost:

Fatigue blouse	$8.00
Fatigue trousers	5.10
Fatigue cap	1.60
White waist belt and plate	.50
White cross belt and equipment	.50
Total	$16.00

Measures for this uniform are taken as soon as the student arrives at College and fit is guaranteed.

A deposit of at least 25 per cent. for this uniform must be made with the Treasurer when the measure is taken, as no uniform will be ordered until the money has been deposited for the same. The uniform must be paid for in full before it is delivered. No uniform is paid for until it is approved by the Commandant of Cadets.

In summer the field service uniform is worn, consisting of drab blouse, shirt and trousers, canvas leggins, regulation campaign hat, tan leather waist belt and black tie.

The cost of the summer outfit is:

1 olive drab blouse	2.50
1 campaign hat	1.00
1 pair canvas leggins	.80
1 harness leather belt	.50
1 black four-in-hand tie	.20
1 pair of white duck trousers	1.50
1 pair olive drab breeches	2.00
1 olive drab blouse	2.50
Total for summer uniform	$10.00

Deposits for the summer uniform must be made immediately after the first of January.

White gloves, collars, etc., may be purchased at the stores near the College or from the contractor furnishing the uniforms.

The uniforms will last more than one year if given careful usage.

ARTICLES NECESSARY TO BE PROVIDED.—All students are required to provide themselves with the following articles, to be brought from home or purchased from the College Park stores on arrival:

1 dozen white standing collars.
6 pairs white gloves (uniform).
6 pairs white cuffs.
1 pair blankets (for single bed).
2 pairs sheets (for single bed).
4 pillow cases.
1 chair (uniform).
6 towels.
8 table napkins.
1 pillow.
1 mattress (uniform).
2 clothes bags (uniform).
1 broom.

All the articles marked (uniform) in the foregoing list can best be purchased after the student arrives at the College. The cost of the entire list should not be more than $15.00 for the year.

ACKNOWLEDGMENTS.

MEDALS.—The authorities of the Institution take this opportunity to express their appreciation of the courtesy of their friends in establishing the following, for competition:

William Pinkney Whyte Medal, for excellence in Oratory, offered by Hon. Isaac Lobe Straus, of Baltimore, Md.

Winfield Scott Schley prize, for excellence in Oratory, offered by B. H. Warner, Esq., of Kensington, Md.

James Douglas Goddard Memorial Medal, to student of Prince George's county making the highest average in studies, offered by his sister, Mrs. Annie K. Goddard James, of Washington, D. C.

STUDENT ORGANIZATIONS.

Students' clubs for religious, social, literary and athletic purposes are encouraged as a means of creating class and college pride, and developing an *esprit de corps* among the students. Each class has its own organization, in which matters relating to the class are discussed and directed. Officers are elected and the unity of the class preserved. This has been found to be a decided aid to discipline and tends to raise the standard of student honor.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

Much encouraging work has been done by this organization during the past year, and gratifying interest has been shown in the meetings.

OFFICERS.

President, E. P. Williams.
Vice-President, W. E. Harrison.
Recorder, S. E. Day.
Treasurer, P. N. Peter.

LITERARY SOCIETIES.

MORRILL SOCIETY.

President, R. C. Williams.
Secretary, C. T. Cockey.

NEW MERCER SOCIETY.

President, H. S. Ford.
Secretary, P. N. Peter.

These societies are invaluable adjuncts to college work. Through them a knowledge of parliamentary law is gained, as well as a readiness of expression and activity in thought, qualities particularly valuable to the American citizen.

The literary society work is under the general supervision of the Professor of Public Speaking, who is always ready to advise with the members in matters of parliamentary law and train them in the delivery of their orations and debates.

ENGINEERING SOCIETY.

One of the newest and most beneficial additions to the M. A. C. is the Engineering Society. Organized in September, 1912, it proved an immediate success, gratifying a long-felt and much-needed want on the part of the engineering students. The general object of the Society is the cultivation of a more active interest in engineering work, while its special aim is to give the student the opportunity to discuss the line of work in which he is interested and to become more accustomed to presenting his ideas. Inasmuch as the Society takes in all members of the Senior and Junior Classes in the Civil, Electrical and Mechanical Engineering Courses, a larger opportunity for acquiring technical knowledge outside of one's own course is offered.

The Society meets twice a month on alternate Thursdays. Papers are presented at alternate meetings by Engineers in practice and by the students themselves.

OFFICERS.

President, E. P. Williams.
Vice-President, F. W. Wright.
Secretary, F. J. McKenna.
Treasurer, F. S. Hoffecker.

THE LIEBIG CHEMICAL SOCIETY.

The Liebig Chemical Society was organized to satisfy a much-felt need. The object of the Society is to have the various chemical problems of the day, discussed by men who have specialized in the different branches of Chemistry, or by the members themselves. This tends to develop a keener interest in Chemistry, and also to broaden the student along Chemical lines.

Membership in this Society is open to all members of the Sophomore, Junior and Senior Classes, who are specializing in Chemistry.

OFFICERS.

President, R. C. Williams.
Vice-President, H. A. Rasmussen.
Secretary-Treasurer, P. N. Peter.

AGRICULTURAL CLUB.

President, D. L. Johnson.
Vice-President, J. E. Shillinger.
Secretary-Treasurer, J. H. Knode.
Sergeant-at-Arms, S. E. Day.

ROSSBOURG CLUB.

The social man is a necessity—hence this organization is encouraged and supported by the President and Faculty. The entertainments have been marked by a spirit which emphasizes the wisdom of its organization and justifies its encouragement.

OFFICERS.

President, R. V. Truitt.
Vice-President, W. T. Fletcher.
Secretary, D. L. Johnson.
Treasurer, R. T. Gray.
Assistant Treasurer, C. T. Cockey.

REVEILLE.

The "Reveille" is the College annual, edited entirely by the Senior Class. Sixteen editions of the "Reveille" have appeared, and each has been characterized by a gratifying improvement in the standard both of originality and expression.

EDITORIAL STAFF.

Editor-in-Chief, J. B. Gray, Jr.
Associate Editors, H. U. Deeley, D. L. Johnson, H. A. Rasmussen.
Business Manager, H. S. Ford.
Assistant Business Managers, L. R. Rogers, J. W. Green.
Treasurer, E. P. Williams.

DEPARTMENT EDITORS.

Art, F. H. O'Neill.
Athletics, R. C. Williams.
Humor, R. V. Truitt, J. B. Coster.
Society, W. T. Fletcher.

THE TRIANGLE.

The "Triangle" is the College newspaper, and is published every two weeks during the scholastic year.

EDITORIAL STAFF.

Editor-in-Chief, J. W. Green.
Athletic Editor, R. S. Brown.
Local Editor, C. T. Cockey.
Associate Local Editor, W. E. Hall.
Agricultural Editor, K. E. Smith.
Freshman Editor, A. C. Medinger.
Alumni Editor, R. Brigham.
Business Manager, E. W. Montell.
Associate Business managers, F. J. McKenna, C. H. Buchwald.

STUDENT ATHLETIC ASSOCIATION.

Membership in the Athletic Association is open to all students free of charge.

The object of the Association is to foster athletic spirit, prevent indiscretion in athletic matters and co-operate with the Athletic Council in the general management of all athletic affairs.

OFFICERS.

President, R. C. Williams.
Secretary, E. W. Montell.

ATHLETIC COUNCIL.

The Athletic Council, in conjunction with the Student Athletic Association, manages all athletic affairs It consists of five members of the Faculty, appointed by the President, and five students, namely, the managers of the football, baseball, track and tennis teams, and the President of the Athletic Association.

THE ORATORICAL ASSOCIATION OF MARYLAND COLLEGES.

The Maryland Agricultural College is a member of this Association, which is composed of St. John's College, Washington College, Western Maryland College and Maryland Agricultural College. Contests are held annually at these colleges in rotation, and a marked improvement is to be observed as a result of its organization.

THE ALUMNI ASSOCIATION.

An Institution can largely be judged by the character of its Alumni. Their success in life is the Institution's pride. The work of the Alumni of a College is its greatest asset. M. A. C. is fortunate in having among its Alumni, men who have attained notable achievements in Agriculture, Engineering and Science. M. A. C. Alumni can be found holding prominent positions in all walks of life.

While for many years the Alumni, through their Association, have taken an active interest in the growth and development of the Institution, it is pleasing to state that this interest has been greatly

increased during the past two or three years and since the recent great fire at the College, the Association has taken active steps to aid the Board of Trustees and Faculty in the rehabilitation of the College.

One of the cherished hopes of the Association, that of having direct representation on the Board of Trustees, has been attained in the appointment of the President of the Alumni Association, by the Governor of the State, as a Trustee of the College. The attainment of this end will naturally greatly increase the enthusiasm and interest of the members of the Association in co-operating more closely than ever with the College authorities in increasing the scope and usefulness of the Institution.

The Alumni Association continues to offer medals for worthy students in the several collegiate departments, debating societies, etc.

The members have also greatly aided in the development of athletics and especially in conducting the joint athletic meets, which were held at the College during the last three years.

The Alumni also co-operate in the publishing of the Triangle.

The officers of the Alumni Association for the present year are: President, Henry Holzapfel, Jr., '93; Vice-President, Wellstead White, '05; Secretary-Treasurer, C. G. Church, '00; Executive Committee, members at large, J. N. Mackall, '05; F. P. Veitch, '91; Triangle Staff—Alumni Editor, R. Brigham, '08; Business Manager, L. B. Broughton, '08.

Graduates and members of the Association are requested to keep the Secretary-Treasurer, C. G. Church, 403 Sixth street, N. E., Washington, D. C., informed of any change in address. Any information concerning the older graduates which will enable the officers to locate and communicate with them will facilitate their efforts and will tend to further the success of the Association.

DEGREES CONFERRED JUNE 18th, 1913.

Honorary.

DOCTOR OF LAWS.

DAVID J. LEWIS, M. C., FROM MARYLAND.

DOCTOR OF SCIENCE.

FRED. W. BESLEY, (M. A. C., '92), BALTIMORE, MD.
HENRY C. SHERMAN, (M. A. C., '93), NEW YORK CITY.
FLETCHER P. VEITCH (M. A. C., '91), COLLEGE PARK, MD.

CIVIL ENGINEER.

MELVIN C. HAZEN (M. A. C., '88), WASHINGTON, D. C.

ELECTRICAL ENGINEER.

RICHARD C. M. CALVERT (M. A. C., '90), OXFORD, N. C.

In Course.

MASTER OF SCIENCE.

EARNEST NEAL CORY (M. A. C., '09), WASHINGTON, D. C.
WALTER CAMERON REEDER (M. A. C., '08), CECIL COUNTY, MD.
CHAS. SYLVESTER RIDGWAY (M. A. C., '06), BELTSVILLE, MD.
EARNEST RALPH SASSCER (M. A. C., '04), WASHINGTON, D. C.

CIVIL ENGINEER.

HARRY DUGAN WILLIAR, JR. (M. A. C., '07), BALTIMORE, MD.

BACHELOR OF SCIENCE.

AGRICULTURE.

HENRY PECK AMES, COLLEGE PARK, MD.

Thesis: "The Deterrent effect of Lime Water in Retarding the Growth of Mold on Germinating Legume and Grass Seeds."

NATHANIEL A. LE SAVOY, NEW YORK CITY.

Thesis: "The Influence of Breed Upon the Milk and Butter of Cattle."

HUGH S. KOEHLER, BLAIRSVILLE, PENNA.

Thesis: "Investigation of the Angora Goat Industry of Maryland."

IRVING LEWIS TOWERS, CHEVY CHASE, MD.

Thesis: "Some Studies of the Causes of Leg Weakness in Chickens."

HORTICULTURE.

JOHN ROWLAND REICHARD, FAIRPLAY, MD.

Thesis: "Natural versus Artificial Pollination of Tomatoes in the Greenhouse."

BIOLOGY.

WILLIAM HENRY WHITE, COLLEGE PARK, MD.

Thesis: "Fumigation with Hydrocyanic Gas with Special Reference to the Maximum and Minimum Dosage for Numerous Greenhouse Crops."

CHEMISTRY.

ALFRED NISBET, BALTIMORE, MD.

Thesis: "Discussion of Methods of Sugar Analysis."

MERCER BROWN MAYFIELD, JR., WASHINGTON, D. C.

Thesis: "A Study of the Acid Contents of Corn with a View to a New Method of Grading the Same."

WILLIAM KEAN ROBINSON, FRANKTOWN, VA.
Thesis: Recovery of Potash from Feldspar."

GENERAL.

GEORGE BYRON MORSE, JR., RIVERDALE, MD.
Thesis: "Development of International Arbitration in the Past One Hundred Years."

CIVIL ENGINEERING.

LEO BLANKMAN, BALTIMORE, MD.
SAMUEL WOLF BLANKMAN, BALTIMORE, MD.
Thesis: "Design of a 500,000 Gallon Water Tank."

MILTON ERNEST DAVIS, BALTIMORE, MD.
Thesis: "Design of Two Modern Fireproof Buildings Connected by a Concrete Arch Bridge."

WILLIAM B. HULL, WESTMINSTER, MD.
EZEKIEL JOHN MERRICK, JR., SUDLERSVILLE, MD.
Thesis: "Location of a Spur Track from Lakeland to College Buildings."

EDWIN EMERSON POWELL, BALTIMORE, MD.
Thesis: "Construction of Broken Stone Roads."

GEORGE PERCIVAL TRAX, EASTON, MD.
Thesis: "The Determination of a Meridian by Various Methods."

ELECTRICAL ENGINEERING.

RALPH SCOTT HEALY, NEW YORK CITY.
Thesis: "Efficiency and Life Tests on Carbon, Tantalum and Tungsten Lamps."

MECHANICAL ENGINEERING.

CHARLES M'ELROY WHITE, LONACONING, MD.
Thesis: "Some Engineering Data."

CERTIFICATES IN TWO-YEAR COURSES.

AGRICULTURE.

Emory Wilhide Benson, Cockeysville, Md.
Gladen Davis, Rocks, Md.
Harry S. Dearstyne, Hawthorne, Conn.
Albert Earl Irving, Baltimore, Md.
James Phillip Hanson Mason, Accotink, Va.
Henry Whitmore White, Dickerson, Md.

HORTICULTURE.

Alexander Morris Todd, Fort Howard, Md.
Lea Gilpin Willson, Silver Spring, Md.

Testimonials of Merit Awarded June 18, 1913.

For distinguished achievement in the promotion of the agricultural interests of Maryland:

GEORGE O. BROWN, OF BALTIMORE CITY.
For his efforts in promoting Poultry Breeding.

W. OSCAR COLLIER, OF TALBOT COUNTY.
For his efforts in improving Farm Seeds.

RICHARD VINCENT, JR., OF BALTIMORE COUNTY.
For his efforts in promoting the Floral interests.

Medals and Prizes Awarded June 18, 1913.

For excellence in the Agricultural Course; offered by the Alumni Association:

N. A. LE SAVOY, OF NEW YORK CITY.
Honorable Mention, H. S. KOEHLER, OF PENNSYLVANIA.

For excellence in the Horticultural Course; offered by the College:
J. R. REICHARD, OF MARYLAND.

For excellence in the Biological Course; offered by the College:
WM. H. WHITE, OF MARYLAND.

For excellence in the Chemical Course; offered by the College:
MERCER BROWN MAYFIELD, OF WASHINGTON, D. C.

For excellence in the Civil Engineering Course; offered by the College:
M. E. DAVIS, OF BALTIMORE CITY.

For excellence in the Electrical Engineering Course; offered by the College:
R. S. HEALY, OF NEW YORK CITY.

For excellence in the Mechanical Engineering Course; offered by the Alumni Association:
C. M. WHITE OF MARYLAND.

For excellence in Debate; offered by the Alumni Association:
S. W. BLANKMAN, OF BALTIMORE CITY.

The William Pinkney Whyte Medal, for excellence in Oratory; offered by Isaac Lobe Straus, Esq.:
J. B. GRAY, JR., OF MARYLAND.

The Goddard Medal, for excellence in scholarship and moral character; offered by Mrs. Annie K. Goddard James:
H. W. TOWNSHEND, OF MARYLAND.

GRADUATES WITH DEGREES AND ADDRESSES.

The following members of the various graduating classes have been located. Any information leading to further additions, addresses and occupations of Alumni will be gratefully received.

CLASS OF '62.

*Franklin, J., B. S.
*Sands, W. B., A. B.

CLASS OF '63.

*Calvert, C. B., A. B.
Todd, W. B., B. S.

CLASS OF '64.

Hall, D., A. M.

CLASS OF '66.

*Hall, E. of B., A. B.
*Roberts, L., Ph. B.
Waters, F., A. B., West River, Md.

CLASS OF '71.

Soper, F. A., A. B., (M. A. '74), Supt. of Public Schools, Baltimore, Md.

CLASS OF '73.

*Henry R. S., A. B., (M. A. '75).
Miller, O., A. B., (M. A. '75).
Regester, J. A., A. B.
Worthington, D., A. B.
Worthington, W., A. B.

CLASS OF '74.

Coffren, J. H., B. S., (M. A. '77).
Davis, H. M., A. B., (M. A. '77), Poolesville, Md.
Griffith, L. A., A. B., (M. A. '77), Upper Marlboro, Md.
Norwood, F. C., A. B., (M. A. '77), Frederick, Md.

CLASS OF '75.

Gray, J. B., A. B., (M. A. '78), Prince Frederick, Md.
Hyde, J. F. B., A. B., 1803 Bolton St., Baltimore, Md.
Lerch, C. E., B. S., Lerch Bros., 110 Hanover St., Baltimore, Md.
Miller, L., B. S., El Paso, Texas.

---

*Deceased.

CLASS OF '76.

*Blair, W. J., B. S., (M. S. '79).
Thomas, T. H., B. S., Maddox, Md.
*Worthington, J. L., B. S.
Preston, J. S., B. S., 815 N. Charles St., Baltimore, Md.

CLASS OF '77.

*Beall, R. R., B. S.
Emack, E. G., B. S., District Building, Washington, D. C.
*Thomas, G., B. S.
Truxton, S., B. S.

CLASS OF '78.

Thomas, W., B. S., Westminster, Carroll Co., Md.

CLASS OF '80.

Gale, H. E., A. B., 260 W. Hoffman St., Baltimore, Md.

CLASS OF '81.

Houston, T. T., A. B., Baltimore, Md.
Mercer, R. S., A. B.
Porter, W. R., A. B.
Rapley, R. R., B. S., 1931 Sixteenth St., N. W., Washington, D. C.
Thomas, W. H., A. B., Westminster, Md.
Wood, C. W., A. B.

CLASS OF '82.

Bowen, P. A., Jr., A. B., 1413 G St., N. W., Washington, D. C.
Freeland, H., A. B., Mutual, Md.
Saunders, C. A., A. B.
*Stonestreet, J. H., A. B.
Wenner, C., A. B.

CLASS OF '83.

Chew, R. B. B., A. B., 512 F St., N. W., Washington, D. C.
Kirby, W. A., A. B., Trappe, Md.
*Lakin, W. A., A. B.
Rapley, E. F., A. B., 628 Louisiana Ave., Washington, D. C.

CLASS OF '84.

Martin, F., B. S.
Lakin, W. T., A. B., Cumberland, Md.

CLASS OF '88.

Chambliss, S. M., A. B., News Building, Chattanooga, Tenn.
Hazen, M. C., B. S., City Surveyor, Washington, D. C.
Johnson, L. B., A. B., Morganza, Md.
*Sigler, W. A., B. S.
Smith, R. E., B. S., Ridgely, Md.
Tolson, A. C., A. B., Gunther Building, Baltimore, Md.
Weems, J. B., B. S.

---

*Deceased.

CLASS OF '89.

Griffith, T. D., B. S., Redland, Md.
